

CE — HVAC EQUIPMENT, PARTS & SUPPLIES | FOR THE HVAC PROFESSIONAL

# AHRI | SYSTEM BUILDER

## NEW AHRI SYSTEM BUILDER

Makes Creating Matched HVAC Systems a Breeze

**AS AN HVAC DEALER OR CONTRACTOR, YOU SPEND A LOT OF YOUR TIME ENGINEERING HVAC SYSTEMS FOR YOUR CUSTOMERS.**

The traditional process is time consuming, tedious, and leaves ample room for human error. With CE's new AHRI System Builder, you can now streamline the process of creating a certified HVAC system, while also instantly checking for current system compatibility, equipment AHRI performance ratings, possible rebates for you and your customer, and real-time pricing and inventory levels. Say goodbye to complicated HVAC equipment matching and say hello to the AHRI System Builder — the only HVAC system configurator you need.

## DESIGN AN HVAC SYSTEM WITH EASE

The CE AHRI System Builder was created to provide HVAC dealers and contractors with a simple way to build HVAC systems. The current process is complicated, requiring an enormous amount of trial and error and an agonizing amount of research. With the AHRI System Builder, everything you need is at your fingertips.

To start building an HVAC system, you can easily input information several different ways depending on your customer's goals and the scope of the job.

## 3 Ways to Design an HVAC System

### SYSTEM NEEDS

If you are looking for specific performance requirements and particular system types, you can use the System Needs approach. Simply choose between Cooling Only, Cooling & Heating, Heat Pump, Heating Only, Packaged, or Ductless and then enter the needs of your customer. You will then be presented with all of the corresponding HVAC matched system solutions available for purchase at CE.

### MODEL NUMBER

Do you already know what equipment you need for the job? Then use the Model Number approach for power users. Just enter the outdoor, indoor and/or furnace model numbers available at CE and the AHRI System Builder will present you with all of the AHRI-certified systems that include those models.

### AHRI CERTIFICATION NUMBER

Similarly, if you already know the AHRI certification number, you can input it using the AHRI Number option. AHRI System Builder will display the current status of that number, as well as the models, pricing, and availability for the included equipment.

NO MATTER WHICH APPROACH YOU CHOOSE, YOU WILL ALWAYS HAVE THE AHRI NUMBER AND EFFICIENCY RATINGS HANDY FOR SAVING, PRINTING, AND OF COURSE, ORDERING. YOU WILL ALSO SEE REAL-TIME INVENTORY LEVELS AND PRICING IN ONE CONVENIENT LOCATION. ALL FEATURES ARE AVAILABLE ON ALL DEVICES, INCLUDING SMARTPHONES, TABLETS, AND DESKTOPS.

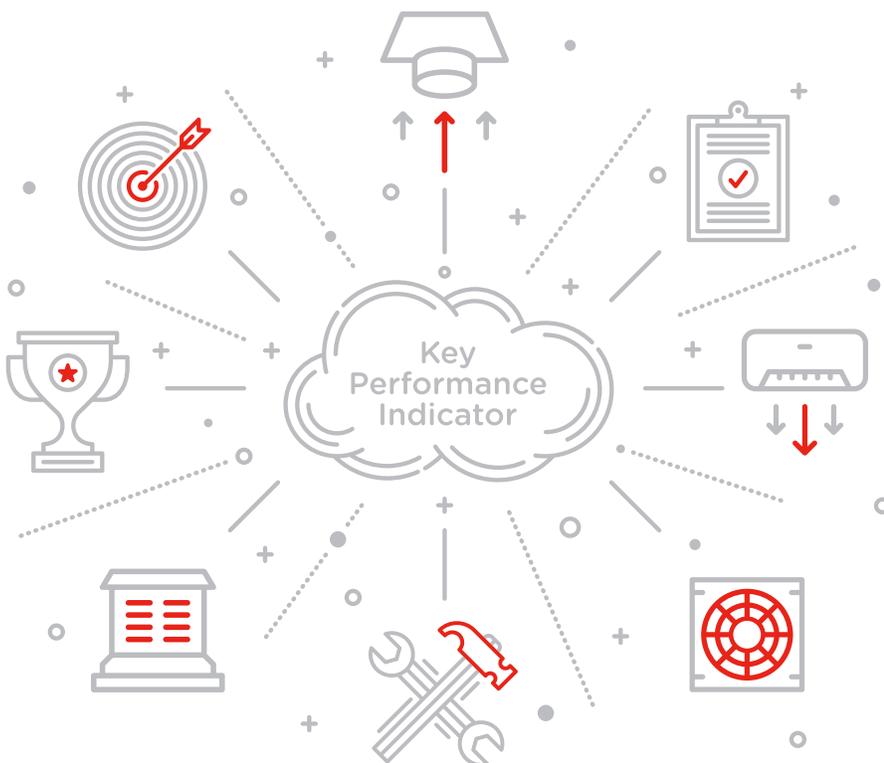

# View Up-to-Date AHRI Ratings

You know how important AHRI (Air Conditioning Heating and Refrigerating Institute) performance ratings are to you and your customers. These ratings are regularly updated by manufacturers and maintained by AHRI. Our AHRI System Builder continuously receives these updates, ensuring that your system is based on the most timely ratings information available.

Our AHRI System Builder allows you to quickly and easily build the correct HVAC system with the confidence of knowing the information is accurate. Instead of visiting the AHRI website yourself and looking up each individual product and possible compatibilities, our AHRI System Builder locates the information for you. Browse unique combinations of AHRI-certified products and instantly

see the overall efficiency and what pieces of equipment make up that system. The AHRI System Builder will also tell you if any controls, valves, or relays are needed for the HVAC system you are creating. You'll never have to question compatibility between several pieces of equipment and accessories again.

You can even specify the minimum performance level your customer needs in order to receive energy rebates and tax credits, and the AHRI System Builder will show you HVAC systems that qualify for these savings. The tool always provides easy access to the AHRI number that your customer may need to verify the efficiency certification ratings with organizations offering the rebates and credits. In addition to the rebate possibilities for your customers, the AHRI System Builder will help you locate which models qualify for your own manufacturer rebates.

## EASILY DEMONSTRATE AND COMPARE PERFORMANCE LEVELS

As you know, most customers are not satisfied with just one option. They want you to present multiple HVAC systems for them so they can compare upfront costs with energy efficiency and possible rebates and credits. Compiling this information was time consuming, to say the least, but with the AHRI System Builder, it no longer has to be. Effortlessly provide your customers with a good, better, and best HVAC system option so they can see at a glance what each option has to offer.

# Order the Entire System Effortlessly

Once the HVAC system is configured, the AHRI System Builder carries you through the ordering process from start to finish and will display all available equipment and accessories, including their current inventory and price.

The AHRI System Builder will also identify required accessories to make the HVAC system function based on its specification, as well as optional accessories that will enhance performance and installation, providing a host of upsell opportunities. It has never been easier to find, select, save, print, and order an HVAC system on whatever device you are using.

## Reclaim Your Limited Time

Long gone are the days of countless hours of research, deciphering cryptic manufacturer model number nomenclature, compiling quotes, and checking compatibilities. With the AHRI System Builder by CE, you can still give your customers the comprehensive data they desire, but you don't have to spend hours computing it. Our instant match systems, live inventory levels, and integrated AHRI ratings mean you can save yourself a life-changing amount of time, and when the HVAC system is complete, you can request delivery or pickup right from your device. And, since the AHRI System Builder works seamlessly between all devices, you can easily work from your office, in your truck, or onsite at the customer's location.

## Retrieve Data On Demand

**Once you've designed the perfect HVAC system, you don't want to throw away all of the information you uncovered. With the AHRI System Builder, every HVAC system you engineer is savable or printable for future reference.**

If past customers have questions, you can instantly pull up their information and the specs of their equipment. You can refer to one of your saved matched HVAC systems to use for another home with similar needs. Or, you can give a hard copy to your employees or technicians for simple on-the-job referencing.

From compiling HVAC options for your customers, to showcasing AHRI ratings and energy savings, to placing the order and setting up delivery, the AHRI System Builder is your go-to for certified HVAC system configuration. CE cares about helping you make the most of your limited time, and we believe there is no room for busy work in the HVAC equipment selection process. You can finally focus on what you do best, and let the AHRI System Builder handle the rest.
