### THE LATEST IN OIL FURNACE TECHNOLOGY

The models OBM and OVM combine high efficiency and quiet operation with oil heating technology. The OBM/OVM can be fired at different rates by a simple nozzle change and oil pump pressure adjustment. Furnaces are available to cover input ranges from 70,000 to 112,000 Btuh. The furnace design is a multipoise style for upflow, downflow, or horizontal applications.

The OBM/OVM is a standard part of a quality-built home. These high efficiency furnaces will provide years of quality service to home builders and homeowners alike.

This model is designed to work as part of a total home comfort system which includes elements for cooling, air cleaning, humidification, ventilation, and zoning.

### OBM/OVM FEATURES / BENEFITS

#### Beckett & Riello Burner Options

- High quality Beckett or Riello oil burners allows safe and efficient combustion of oil.
- Both manufacturers approved for optional Sealed Combustion Venting.

- Ignition control and fan timer board provide reliable operation and easy connection of thermostat and accessory wiring.

#### Casing

- Made of 22-gauge painted steel for years of durability.

#### Insulation and Soundproofing

- Unique sound trap along with insulated walls efficiently capture most combustion noise and vibration to make this unit one of the quietest on the market.

#### Combustion Products Venting

- Front flue outlet.
- Unit may be vented using Type L vent material and a factory-built metal or masonry chimney.
- Unit may also be sidewall vented with optional Sealed Combustion System.
- Unit may also be sidewall vented with an approved power venter.

#### Adjustable Blower Speed

- OBM units equipped with 4-speed blower for precise airflow selection of heating or cooling operation.
- OVM units equipped with ECM 2.3 Variable Speed high-efficiency motor.

#### Constant Low-Speed Blower Switch (OBM models)

- Allows continual low-speed air circulation through the home to maximize comfort while maintaining efficiency.
- Air is constantly filtered and stagnant air is avoided.
- This option can be controlled by the homeowner.

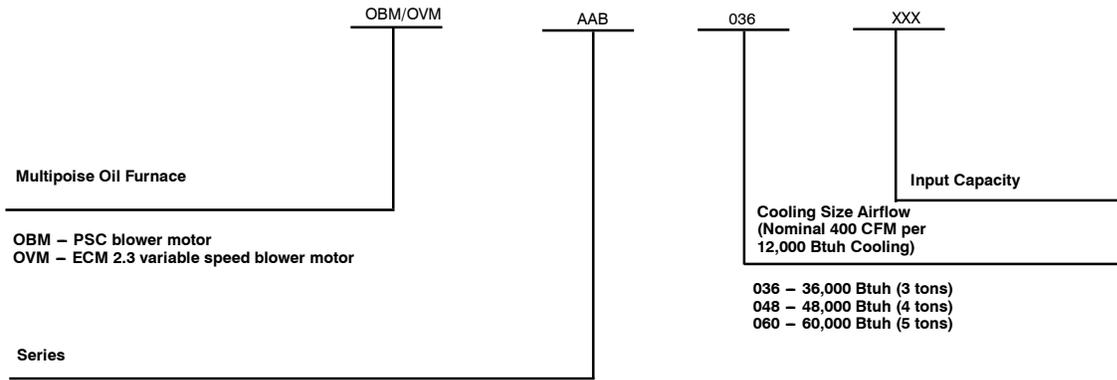

#### Combustion Chamber/Heat Exchanger

- Composed of stainless and aluminized steel, the unique combination combustion chamber/heat exchanger resists corrosion, overheating, and deterioration.
- Heat transfer properties make it highly efficient.
- All seams are tightly welded for leak-free operation.

#### Certifications

- OBM/OVM units are CSA certified.
- AHRI efficiency rating certified.
- Canada Specifications: Up to 85.5% AFUE for Canada (CSA B212 + Canadian laws)
- USA Specifications: Up to 85.2% AFUE for USA (ASHRAE 103 + American laws)

The CFM (L/s) shown are reduced by 20% if there is 24 VAC input to Y1 (Slow speed of 2-speed compressor)

### DELAY PROFILE FOR OIL HEATING MODE

SW4- DELAY DIP switch position	HEAT INPUT (USGPH)	PreRun On-Delay CFM (L/s) Level - Time	ShortRun On-Delay CFM (L/s) Level - Time	Off-Delay CFM (L/s) Level - Time

C (1=OFF, 2=ON)	0.50	13% - 60 sec.	13% - 60 sec	38% -3 min.
D (1=ON, 2=ON)	All	13% - 30 sec.	100% - 0 sec	100% - 2 min.

PreRun and ShortRun are the periods of time when the the blower starts at very low CFM (L/s) to minimize the distribution of cool air in the system and then runs up to normal speed.

Off Delay is the time required to cool down the heat exchanger with low CFM (L/s), to minimize cool draft in the air distribution system.
