- **Installs in minutes!**
- **Limited 5-year warranty!**
- **Direct shipments available to your customer upon request**

Every day your outside air conditioning unit is besieged with falling leaves and debris that enter your system. Once inside your unit, these particles block drains and filters, cause rust, and become a breeding ground for insects. As any heating/cooling specialist will tell you, this can dramatically reduce the efficiency of your air conditioning system and lead to high repair costs.

It's time to end this unnecessary expense and hassle. With **LEAF GUARD's** unique design, small insects and debris that would normally clog your system are blocked out — stopping the damage before it starts. This means a cleaner air conditioning unit which can result in increased efficiency and fewer maintenance bills.

Best of all, **LEAF GUARD** is simple to use. Unlike other products, **LEAF GUARD** has adjustable straps to fit over any size unit. Just place the filter over your system, adjust the straps, snap the unit in place, and leave it to us!

Discourages  
Insects

Reduces  
Corrosion

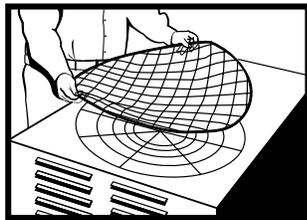

Saves  
Money

## *Easy -Step Installation!*

1. Place the grid cover over the top vent of your air conditioning unit. Be sure that the **LEAF GUARD** covers the entire vent.

2. Position the flexible strap across the **LEAF GUARD**. Take the secure ties and slip them between the grid holes and the strap.

3. Pull the ties until they are tight and locked into place. It's that simple!
