SEALS REFRIGERANT LEAKS

For Commercial Air Conditioning and Refrigeration Systems

Refrigerant leaks on commercial air conditioning and refrigeration systems are a big problem. Owners and operators of the equipment are required to log these leak rates, and once they reach the trigger rate, the EPA requires the leaks to be fixed or the equipment to be retrofitted. Many of these leaks are difficult to find and fix, making A/C EasySeal-XL the perfect answer for equipment having a refrigerant charge of 125 pounds or more.

- ▶ One can treats systems with refrigerant charge of 125 lbs. – 250 lbs.
- ▶ Multiple cans can be used for larger systems
- ▶ Works with R-502, R-134A, R-404A, R-507, R-407C, and all commercially available refrigerants except ammonia
- ▶ Injects quickly and easily with included charging hose
