VindEX Coastal eliminates “dirty-sock” odor, guards and protects hvac equipment from damaging corrosion in coastal environments

VindEX Coastal is the innovative field-applied polymer engineered to seal and protect hvac coils by the elimination of contact with the harsh coastal salt-water environment. **VindEX Coastal** eliminates the “dirty-sock” odor, permanently seals equipment surfaces and preserves the coil’s heat transfer properties.

Developed in Research Triangle Park, NC - it’s the result of a collaborative effort, bringing together the best scientific minds and research. The patented formula is a derivative of a medical grade polymer already in use as a medical device in battlefield conditions.

VindEX Coastal is professionally applied to hvac equipment with the packaged spray applicator to sanitize and seal. It dries rapidly, allowing the equipment to be put back in operation within minutes of application. **Once cured, the sealant prevents corrosion and rust that leads to refrigerant leaks and the reduction in overall system operating life.**

For application instructions / MSDS visit your local Carrier of the Southeast Supply or visit:
