## SAFETY CAUTION

The important contents concerned to the safety are described on the product itself and on this Service Manual. Please read this Service Manual and understand the described items thoroughly in the following contents (Indications/Illustrated marks), and keep the manual for reference. The manufacturer shall not assume any liability for the damage caused by not observing the description of this manual.

### [Explanation of indications]

Indication	Explanation
 <b>DANGER</b>	Indicates that an imminent danger causing a death or serious injury of the repair engineers and the third parties may occur when an incorrect work has been executed.
 <b>WARNING</b>	Indicates possibilities of a danger causing death or serious injury of the repair engineers, the third parties, and the users due to problems from the product after installation when an incorrect work has been executed.
 <b>CAUTION</b>	Indicates that an injury or property damage (*) may be caused to the repair engineers, the third parties involved, and the users due to troubles of the product after installation when an incorrect work has been executed.

\* Property damage : Enlarged damage concerned with property, furniture, and domestic animal/pet

### [Explanation of illustrated marks]

Mark	Explanation
	Indicates prohibited items (Forbidden to do) The sentences near an illustrated mark describe the concrete prohibited contents.
	Indicates mandatory items (Compulsory to do) The sentences near an illustrated mark describe the concrete mandatory contents.
	Indicates cautions (Including danger/warning) The sentences or illustration near or in an illustrated mark describe the concrete cautious contents.

### [Confirmation of warning label on the main unit]

Confirm that labels are indicated on the specified positions  
(Refer to the Parts disassembly diagram (Outdoor unit).)

If removing the label when parts are being replaced, stick it back on the original location.

 <b>DANGER</b>	
 Turn off breaker.	<b>Turn “OFF” the breaker before removing the front panel and cabinet, otherwise an electric shock is caused by high voltage which may result in death or injury.</b> During operation, a high voltage with 400V or higher of circuit (*) at secondary circuit of the high-voltage transformer is applied. If touching a high voltage with the naked hands or body, an electric shock is caused even if using an electric insulator. * : For details, refer to the electric wiring diagram.
 Execute discharge between terminals.	<b>When removing the front panel or cabinet, execute short-circuit and discharge between high-voltage capacitor terminals.</b> If discharge is not executed, an electric shock is caused by high voltage which could result in death or injury. After turning off the breaker, high voltage is kept on the high-voltage capacitor.
 Prohibition	<b>Do not turn on the breaker under condition that the front panel and cabinet are removed.</b> An electric shock is caused by high voltage which could result in death or injury.

## ⚠ WARNING

 Check ground wires.	<p><b>Before troubleshooting or repair work, check the ground wire is connected to the ground terminals of the main unit, otherwise an electric shock is caused when a leak occurs.</b></p> <p>If the ground wire is not correctly connected, contact an electrician for rework.</p>
 Prohibition of modification.	<p><b>Do not modify the products.</b></p> <p>Do not also disassemble or modify the parts. It may cause a fire, electric shock or injury.</p>
 Use specified parts.	<p><b>For spare parts, use those specified (*).</b></p> <p>If unspecified parts are used, a fire or electric shock may be caused.</p> <p>*: For details, refer to the parts list.</p>
 Do not bring a child close to the equipment.	<p><b>Before troubleshooting or repair work, do not bring a third party (a child, etc.) except the repair engineers close to the equipment.</b></p> <p>It causes an injury with tools or disassembled parts. Please inform the users so that the third party (a child, etc.) does not approach the equipment.</p>
 Insulating measures	<p><b>Connect the cut-off lead wires with crimp contact, etc, put the closed end side upward and then apply a water-cut method, otherwise a leak or fire is caused at the users' side.</b></p>
 No fire	<p><b>When repairing the refrigeration cycle, take the following measures.</b></p> <ol style="list-style-type: none"> <li>1) Be attentive to fire around the cycle. When using a gas stove, etc, be sure to put out fire before work; otherwise the oil mixed with refrigerant gas may catch fire.</li> <li>2) Do not use a welder in the closed room. When using it without ventilation, carbon monoxide poisoning may be caused.</li> <li>3) Do not bring inflammables close to the refrigerant cycle, otherwise fire of the welder may catch the inflammables.</li> </ol>
 Refrigerant	<p><b>Check the used refrigerant name and use tools and materials of the parts which match with it.</b></p> <p>For the products which use R410A refrigerant, the refrigerant name is indicated at a position on the outdoor unit where is easy to see. To prevent miss-charging, the route of the service port is changed from one of the former R22.</p> <p><b>Do not use any refrigerant different from the one specified for complement or replacement.</b></p> <p>Otherwise, abnormally high pressure may be generated in the refrigeration cycle, which may result in a failure or explosion of the product or an injury to your body.</p> <p><b>For an air conditioner which uses R410A, never use other refrigerant than R410A.</b>  <b>For an air conditioner which uses other refrigerant (R22, etc.), never use R410A.</b></p> <p>If different types of refrigerant are mixed, abnormal high pressure generates in the refrigeration cycle and an injury due to breakage may be caused.</p> <p><b>Do not charge additional refrigerant.</b></p> <p>If charging additional refrigerant when refrigerant gas leaks, the refrigerant composition in the refrigerating cycle changes results in change of air conditioner characteristics or refrigerant over the specified standard amount is charged and an abnormal high pressure is applied to the inside of the refrigerating cycle resulted in cause of breakage or injury. Therefore if the refrigerant gas leaks, recover the refrigerant in the air conditioner, execute vacuuming, and then newly recharge the specified amount of liquid refrigerant. In this time, never charge the refrigerant over the specified amount.</p> <p><b>When recharging the refrigerant in the refrigerating cycle, do not mix the refrigerant or air other than R410A into the specified refrigerant.</b></p> <p>If air or others is mixed with the refrigerant, abnormal high pressure generates in the refrigerating cycle resulted in cause of injury due to breakage.</p> <p><b>After installation work, check the refrigerant gas does not leak.</b></p> <p>If the refrigerant gas leaks in the room, poisonous gas generates when gas touches fire such as fan heater, stove or cooking stove though the refrigerant gas itself is innocuous.</p> <p><b>Never recover the refrigerant into the outdoor unit.</b></p> <p>When the equipment is moved or repaired, be sure to recover the refrigerant with recovering device. The refrigerant cannot be recovered in the outdoor unit; otherwise a serious accident such as breakage or injury is caused.</p>
 Assembly/Cabling	<p><b>After repair work, assemble the disassembled parts, and connect and lead the removed wires as before. Perform the work so that the cabinet or panel does not catch the inner wires.</b></p> <p>If incorrect assembly or incorrect wire connection was done, a disaster such as a leak or fire is caused at user's side.</p>

 <b>WARNING</b>	
 Insulator check	<p><b>After the work has finished, be sure to use an insulation tester set (500V Megger) to check the resistance is 2MΩ or more between the charge section and the non-charge metal section (Ground position).</b></p> <p>If the resistance value is low, a disaster such as a leak or electric shock is caused at user's side.</p>
 Ventilation	<p><b>When the refrigerant gas leaks during work, execute ventilation.</b></p> <p>If the refrigerant gas touches a fire, poisonous gas generates. A case of leakage of the refrigerant and the closed room full with gas is dangerous because a shortage of oxygen occurs. Be sure to execute ventilation.</p>
 Be attentive to electric shock	<p><b>When checking the circuit with the power-ON, use rubber gloves and do not touch the charging section.</b></p> <p>If touching to the charging section, an electric shock may be caused.</p> <p><b>When you access inside of the service panel to repair electric parts, wait for about five minutes after turning off the breaker. Do not start repairing immediately.</b> Otherwise you may get electric shock by touching terminals of high-voltage capacitors. Natural discharge of the capacitor takes about five minutes.</p>
 Compulsion	<p><b>When the refrigerant gas leaks, find the leaked position and repair it.</b></p> <p>If the leaked position cannot be found and the repair work is interrupted, pump-down and tighten the service valve, otherwise the refrigerant gas may leak into the room. The poisonous gas generates when gas touches fire such as fan heater, stove or cooking stove though the refrigerant gas itself is innocuous.</p> <p><b>When installing equipment which includes a large amount of charged refrigerant such as a multi air conditioner in a sub-room, it is necessary that the density does not the limit even if the refrigerant leaks.</b></p> <p>If the refrigerant leaks and exceeds the limit density, an accident of shortage of oxygen is caused.</p> <p><b>For the installation/moving/reinstallation work, follow to the Installation Manual.</b></p> <p>If an incorrect installation is done, a trouble on the refrigerating cycle, water leak, electric shock or fire is caused.</p>
 Check after repair	<p><b>After repair work has been finished, check there is no trouble.</b></p> <p>If check is not executed, a fire, electric shock or injury may be caused. For a check, turn off the power breaker.</p>
 Check after reinstallation	<p><b>After repair work (installation of front panel and cabinet) has finished, execute a test run to check there is no generation of smoke or abnormal sound.</b></p> <p>If check is not executed, a fire or an electric shock is caused. Before test run, install the front panel and cabinet.</p>
	<p><b>Check the following items after reinstallation.</b></p> <ol style="list-style-type: none"> <li>1) The ground wire is correctly connected.</li> <li>2) The power cord is not caught in the product.</li> <li>3) There is no inclination or unsteadiness and the installation is stable.</li> </ol>

 <b>CAUTION</b>	
 Put on gloves	<p><b>Be sure to put on the gloves (*) and a long sleeved shirt: otherwise an injury may be caused with the parts, etc.</b></p> <p>(*) Heavy gloves such as work gloves</p>
 Cooling check	<p><b>When the power is turned on, start to work after the equipment has been sufficiently cooled.</b></p> <p>As temperature of the compressor pipes and others became high due to cooling/heating operation, a burn may be caused.</p>

## • Refrigerant (R410A)

This air conditioner adopts a HFC type refrigerant (R410A) which does not deplete the ozone layer.

### 1. Safety Caution Concerned to Refrigerant (R410A)

The pressure of R410A is high 1.6 times of that of the previous refrigerant (R22).

Accompanied with change of refrigerant, the refrigerating oil has been also changed.

Therefore, be sure that water, dust, the previous refrigerant or the previous refrigerating oil is not mixed into the refrigerating cycle of the air conditioner with refrigerant (R410A) installation work or service work.

If an incorrect work or incorrect service is performed, there is a possibility of a serious accident.

Use the tools and materials exclusive to R410A to ensure a safe work.

### 2. Cautions on Installation/Service

- 1) Do not mix other refrigerant or refrigerating oil.

For the tools exclusive to R410A, shapes of all the joints including the service port differ from those of the previous refrigerant in order to prevent mixture of them.

- 2) As the use pressure of the refrigerant (R410A) is high, use material thickness of the pipe and tools which are specified for R410A.

- 3) In the installation time, use clean pipe materials and work with great attention so that water and others do not mix in because pipes are affected by impurities such as water, oxide scales, oil, etc.

Use clean pipes.

Be sure to braze with flowing nitrogen gas. (Never use any other gas except for nitrogen.)

- 4) For the ground protection, use a vacuum pump for air purge.

- 5) R410A refrigerant is azeotropic mixture type refrigerant.

Therefore use liquid type to charge the refrigerant. (If using gas for charging, composition of the refrigerant changes and then characteristics of the air conditioner change.)

### 3. Pipe Materials

For the refrigerant pipes, copper pipe and joints are mainly used.

It is necessary to select the most appropriate pipes to conform to the standard.

Use clean material in which impurities adhere inside of pipe or joint is minimal.

#### 1) Copper pipe

##### <Piping>

The pipe thickness, flare finishing size, flare nut and others differ according to a refrigerant type.

When using a long copper pipe for R410A, it is recommended to select "Copper or copper-base pipe without seam" and one with bonded oil amount 0.0001 lbs / 32' 10" (40mg / 10m) or less.

Also do not use crushed, deformed, discolored (especially inside) pipes.

(Impurities cause clogging of expansion valves and capillary tubes.)

##### <Flare nut>

Use the flare nuts which are attached to the air conditioner unit.

#### 2) Joint

The flare joint and socket joint are used for joints of the copper pipe.

The joints are rarely used for installation of the air conditioner. However clear impurities when using them.

## 4. Tools

### 1. Required Tools for R410A

Mixing of different types of oil may cause a trouble such as generation of sludge, clogging of capillary, etc. Accordingly, the tools to be used are classified into the following three types.

- 1) Tools exclusive for R410A (Those which cannot be used for conventional refrigerant (R22))
- 2) Tools exclusive for R410A, but can be also used for conventional refrigerant (R22)
- 3) Tools commonly used for R410A and for conventional refrigerant (R22)

The table below shows the tools exclusive for R410A and their interchangeability.

#### Tools exclusive for R410A (The following tools for R410A are required.)

Tools whose specifications are changed for R410A and their interchangeability

No.	Used tool	Usage	R410A air conditioner installation		Conventional air conditioner installation
			Existence of new equipment for R410A	Whether conven- tional equipment can be used	Whether conventional equipment can be used
①	Flare tool	Pipe flaring	Yes	*(Note)	Yes
②	Copper pipe gauge for adjusting projection margin	Flaring by conventional flare tool	Yes	*(Note)	*(Note)
③	Torque wrench	Tightening of flare nut	Yes	No	No
④	Gauge manifold	Evacuating, refrigerant charge, run check, etc.	Yes	No	No
⑤	Charge hose				
⑥	Vacuum pump adapter	Vacuum evacuating	Yes	No	Yes
⑦	Electronic balance for refrigerant charging	Refrigerant charge	Yes	Yes	Yes
⑧	Refrigerant cylinder	Refrigerant charge	Yes	No	No
⑨	Leakage detector	Gas leakage check	Yes	No	Yes

**(Note)** When flaring is carried out for R410A using the conventional flare tools, adjustment of projection margin is necessary. For this adjustment, a copper pipe gauge, etc. are necessary.

#### General tools (Conventional tools can be used.)

In addition to the above exclusive tools, the following equipments which serve also for R22 are necessary as the general tools.

- |  |  |
|--|--|
| 1) Vacuum pump. Use vacuum pump by<br>attaching vacuum pump adapter. | 7) Screwdriver (+, -)                  |
| 2) Torque wrench   | 8) Spanner or Monkey wrench            |
| 3) Pipe cutter   | 9) Hole core drill                     |
| 4) Reamer  | 10) Hexagon wrench (Opposite side 4mm) |
| 5) Pipe bender   | 11) Tape measure                       |
| 6) Level vial  | 12) Metal saw                          |

Also prepare the following equipments for other installation method and run check.

- |                |  |
|----------------|--|
| 1) Clamp meter | 3) Insulation resistance tester (Megger) |
| 2) Thermometer | 4) Electroscop                           |

No.	Item	Outline of specifications	Remarks
15	DC motor	<p>1) When the fan stator, positioning is performed for the starter and the rotor. (Vibrate slightly)</p> <p>2) DC motor operates according to the command from the indoor P.C. board.</p> <p><b>(Note)</b> If the fan rotates by entry of outside air, etc while the air conditioner stopped, the indoor unit may operate as the fan motor stops.</p> <p><b>(Note)</b> If the fan lock was detected, the operation of the indoor unit stops and the check code is displayed.</p> <p><b>(Note)</b> If the incorrect duct design was found during installation work or you carelessly opened the service panel (drain pump) of the main unit during operation, the check code [P12] is output and the motor stops.</p>	Check code [P12]
16	Save operation	<p>1) The save operation starts when  button on the remote control is turned on.</p> <p>2) While the save operation is performed,  segment goes on the screen of the wired remote control.</p> <p>3) The request capacity ratio is restricted to approx. 75% during save operation.</p> <p>4) If the save operation was validated, the contents are held during the operation stop, the operation mode change and the resetting of power supply. Therefore the operation at the next time also will be activated with "Save operation is valid".</p>	

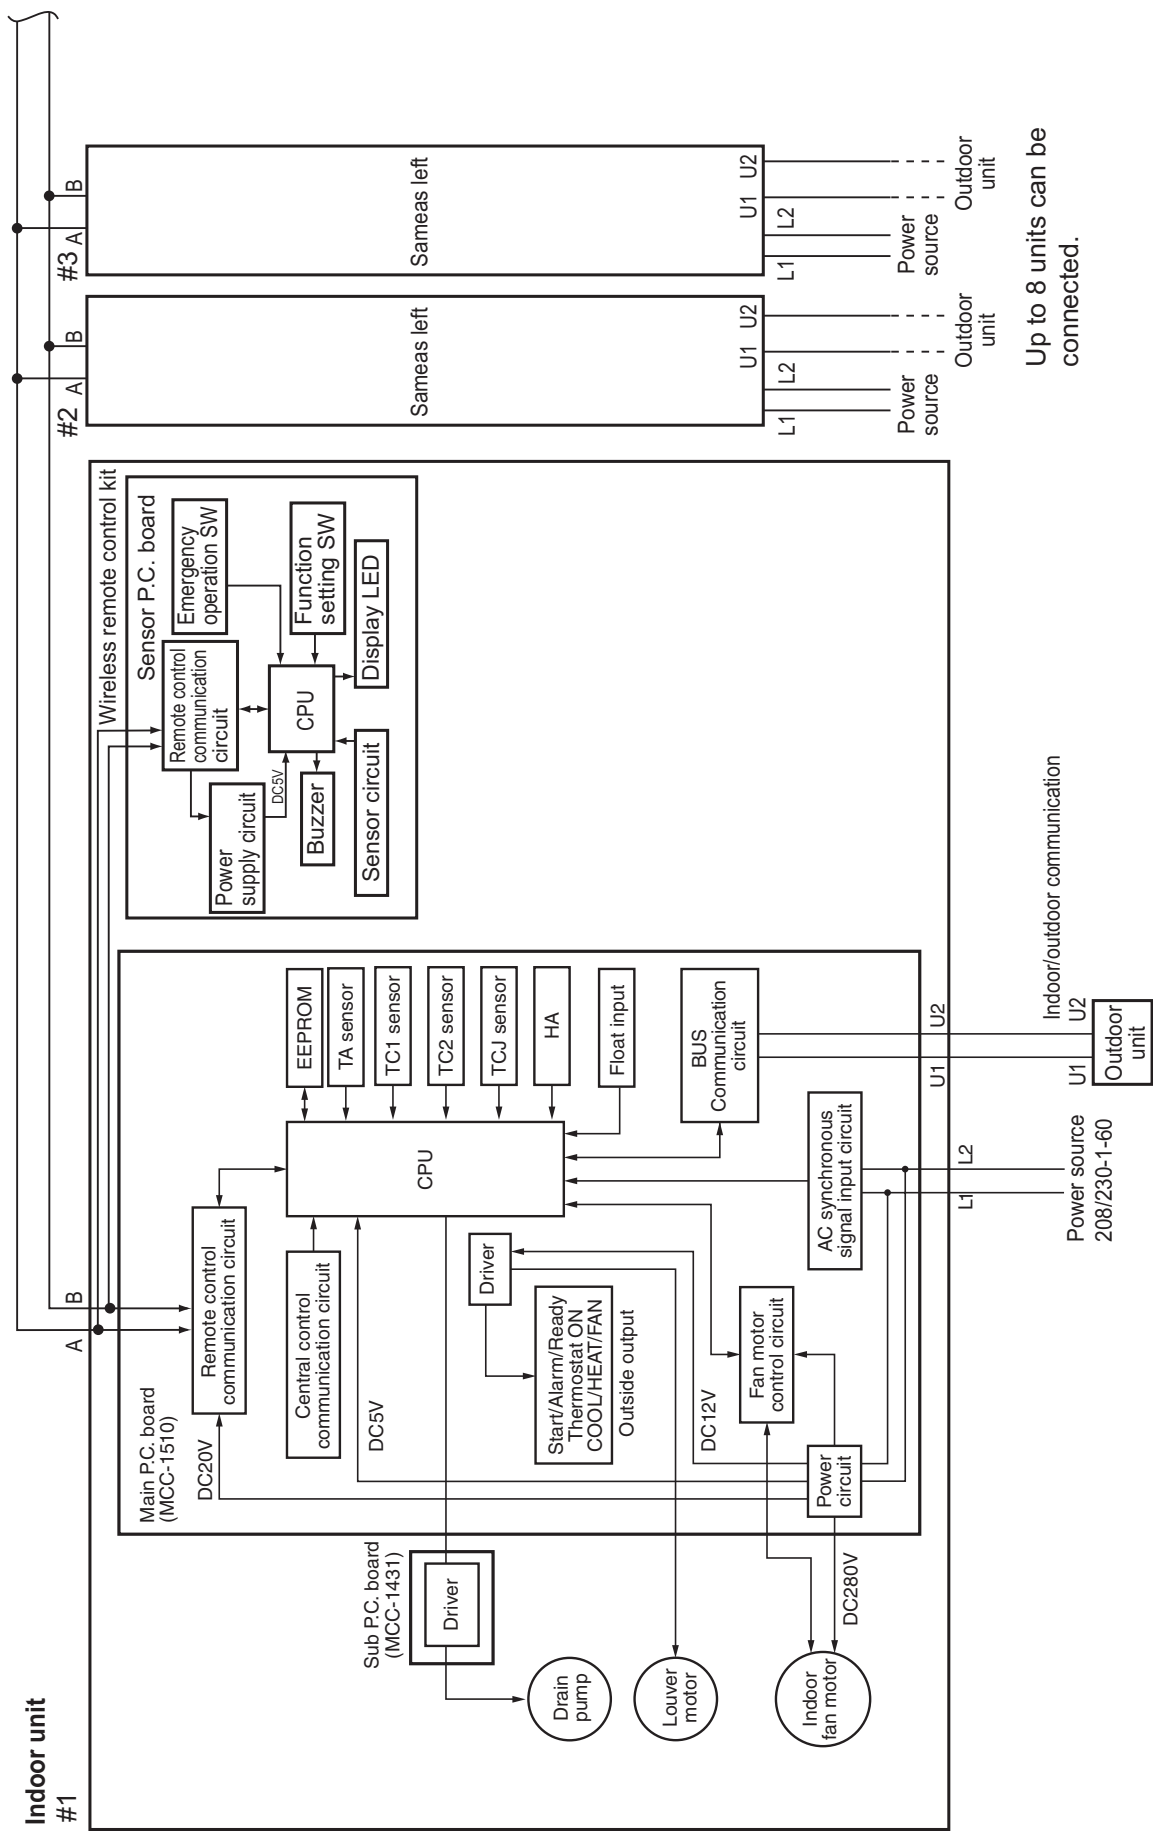

# 7. APPLIED CONTROL AND FUNCTION

## 7-1. Indoor Control Block Diagram

### 7-1-1. When Main (Simple) Wired Remote Control Connected

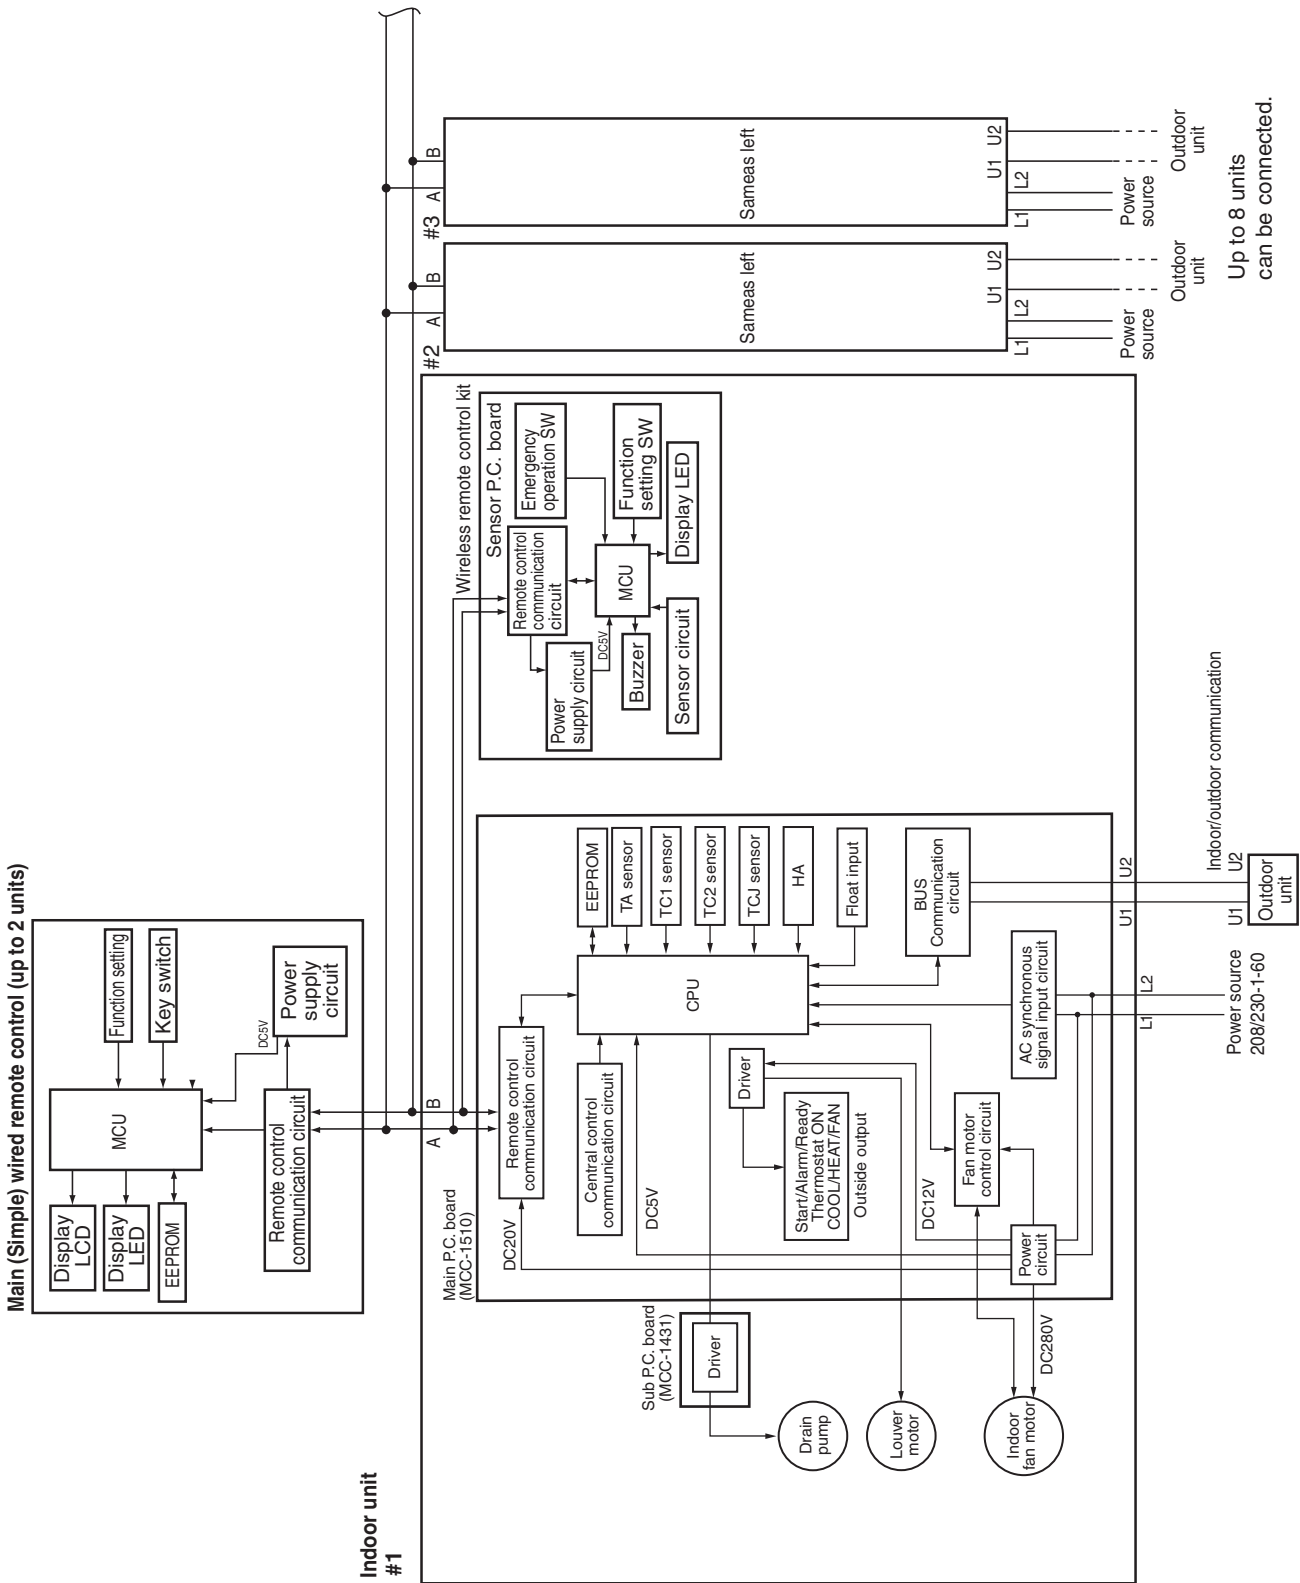

7-1-2. When Wireless Remote Control Kit Connected

Up to 8 units can be connected.

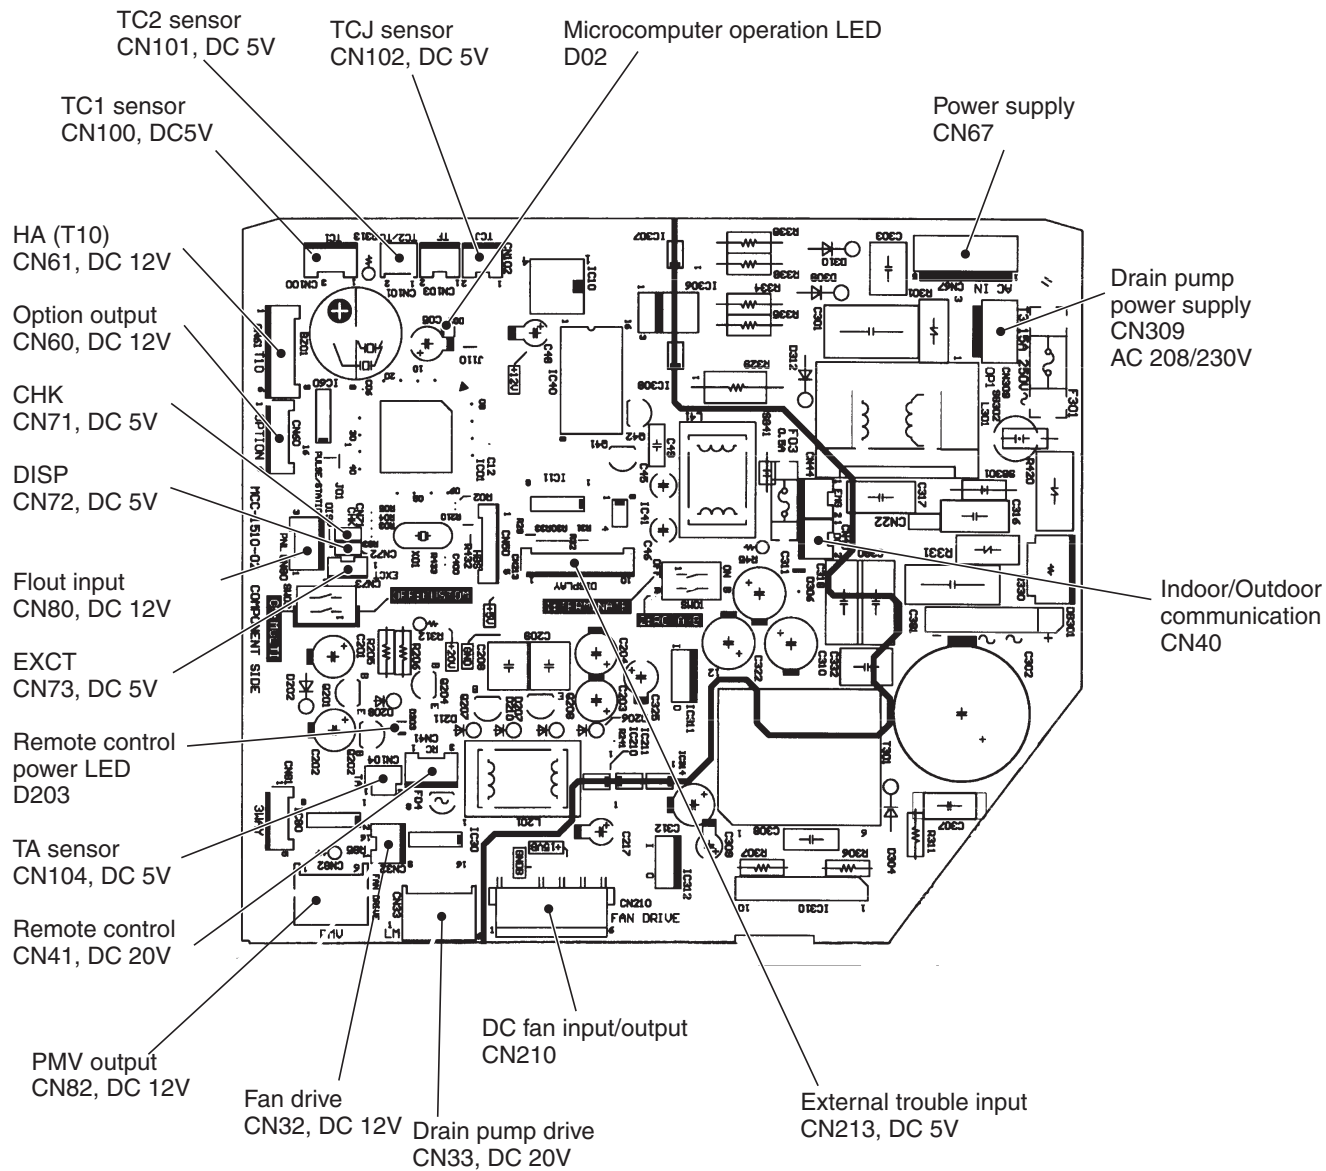

7-1-3. When Both Wired (Simple) Remote Control and Wireless Remote Control Kit Connected

## 7-1-4. Indoor Printed Circuit Board

### MCC-1510

## P.C. Board Optional Switch/Connector Specifications

Function	Connector No.	Pin No.	Specifications	Remarks				
External static pressure	SW01	Bit 1	No use	Turn the switch to ON, when using the external static pressure function.				
		Bit 2	Input	SW01 <Bit 2>	OFF	ON	OFF	ON
	SW02	Bit 1	No use	SW02 <Bit 2>	OFF	OFF	ON	ON
			Bit 2	Input	External static pressure	0.25 in.WG (62Pa) (Default)	0.35 in.WG (87Pa)	0.45 in.WG (112Pa)
		Fan output	CN32	1	DC12 V	Setup at shipment: Linked operation of ON with operation of indoor unit and OFF with stop		
2	Output	* The setup of single operation by FAN button on remote control is executed from remote control. (DN = 31)						
HA	CN61	1	Start / stop input	Start / stop input for HA (J01: In place / Removed = Pulse input (factory default) / Step input)				
		2	0 V (COM)					
		3	Remote control disabling input	Enables / disables start / stop control via remote control				
		4	In-operation output	ON during operation (HA answerback signal)				
		5	DC 12 V (COM)					
		6	Alarm output	ON while alarm ON				
Optional output	CN60	1	DC12 V (COM)					
		2	Defrost output	ON during defrosting of outdoor unit				
		3	Thermostat-ON output	ON when Real thermostat-ON (Comp. ON)				
		4	Cooling output	ON when operation mode is cooling line (Cool, Dry, Cooing/Heating AUTO cooling)				
		5	Heating output	ON when operation mode is heating line (Heat, Cooling/Heating AUTO heating)				
		6	Fan output	ON when indoor fan is ON				
External trouble input	CN213	1	DC5 V (COM)	Generates test code "L30" and automatically shuts down air conditioner ( only if condition presists for 1 minute) (DN:2A = 2, at shipment from factory)				
		2	External troublr input					
CHK Operation check	CN71	1	Check mode input	This check is used for operation check of indoor unit. (The specified operation such as indoor fan "H", drain pump ON, etc. is executed without communication with outdoor unit or remote control.)				
		2	0 V					
DISP Display mode	CN72	1	Display mode input	Display mode, communication is enabled by indoor unit and remote control only. (When power supply is turned on.) Timer short (Usual)				
		2	0 V					
EXCT Demand	CN73	1	Demand input	Indoor unit forced thermostat-OFF operation				
		2	0 V					

## 7-2. Functions at test run

### ■ Cooling/Heating test run check

The test run for cooling/heating can be performed from either indoor remote control or outdoor interface P.C. board.

#### 1. Start/Finish operation of test run

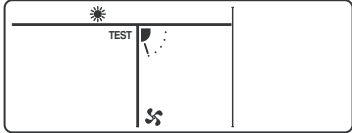

##### ◎ Test run from indoor remote control

— Wired remote control: Refer to the below item of “Test run” of the wired remote control.

— Wireless remote control: Refer to the next page item of “Test run” of the wireless remote control.

#### ◆ In case of wired remote control

Procedure	Operation contents
<b>1</b>	Push [TEST] button for 4 seconds or more. [TEST] is displayed at the display part and the mode enters in TEST mode. 
<b>2</b>	Push [ON/OFF] button.
<b>3</b>	Change the mode from [COOL] to [HEAT] using [MODE] button. <ul style="list-style-type: none"> <li>Do not use [MODE] button for other mode except [COOL]/[HEAT] modes.</li> <li>The temperature cannot be adjusted during test run.</li> <li>The trouble detection is performed as usual.</li> </ul> 
<b>4</b>	After test run, push [ON/OFF] button to stop the operation. (Display on the display part is same to that in Procedure <b>1</b> .)
<b>5</b>	Push [TEST] button to clear the TEST mode. ([TEST] display in the display part disappears and status becomes the normal stop status.) 

**Note)** The test run returns to the normal operation after 60 minutes.

### <In case of wireless remote control (TCB-AX32-UL)>

1. When TEMPORARY button is pushed for 10 seconds or more, Pi!" sound is heard and the operation changes to a forced cooling operation. After approx. 3 minutes, a cooling operation is forced to start. Check if cool air starts blowing. If the operation does not start, check wiring again.
2. To stop a test operation, push TEMPORARY button once again (Approx. 1 second).
  - Check wiring / piping of the indoor and outdoor units in forced cooling operation.

### ■ Check function for operation of indoor unit (Functions at indoor unit side)

This function is provided to check the operation of the indoor unit without communication with the remote control or the outdoor unit. This function can be used regardless of operation or stop of the system. However, if using this function for a long time, a malfunction of the equipment may be caused. Limit using this function to few minutes only several minutes.

#### [How to operate]

- 1) Short-circuit CHK pin (CN071 on the indoor P.C. board).  
The operation mode differs according to the indoor unit status in that time.  
Normal time: Both float SW and fan motor are normal.  
Abnormal time: Either one of float SW or fan motor is abnormal.
- 2) Restricted to the normal time, if short-circuiting DISP pin (CN072 on the indoor P.C. board) in addition to short-circuit of CHK pin (CN071 on the indoor P.C. board), the minimum opening degree (30pls) can be set to the indoor PMV only.  
When opening DISP pin, the maximum opening degree (1500pls) can be obtained again.

#### [How to clear]

Open CHK pin. While the system is operating, it stops once but automatically returns to operation after several minutes.

	Short-circuit of CHK pin(CN071)		
	Normal time		Abnormal time
	DISP pin open(CN071)	DISP pin short circuit(CN071)	
Fan motor	(H)	(H)	Stop
Indoor PMV (*)	Max. opening degree (1500pls)	Min. opening degree (30pls)	Min. opening degree (30pls)
Communication	All ignored	All ignored	All ignored
P.C. board LED	Lights	Lights	Flashes

### 7-3. Method to Set Indoor Unit Function DN Code

(When performing this task, be sure to use a wired remote control.)

<Procedure> To be performed only when system at rest

- 1** Push the  +  +  buttons simultaneously and hold for at least 4 seconds.

The unit No. displayed first is the address of the header indoor unit in group control.  
Then the fan of the selected indoor unit move.

- 2** Each time the “Select unit” side of the  button is pushed, one of the indoor unit Nos. under group control is displayed in turn. Then the fan of the selected indoor unit move.

- 3** Use the  button to select the CODE No. (DN code) of the desired function.

- 4** Use the  button to select the desired SET DATA associated with the selected function.

- 5** Push the  button. (The display changes from flashing to steady.)

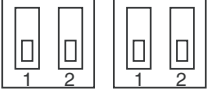

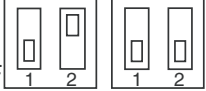

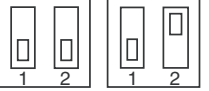

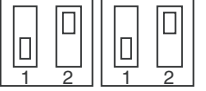

- To change the selected indoor unit, go back to step **2**.
- To change the selected function, go back to step **3**.

- 6** When the  button is pushed, the system returns to normal off state.

**Function CODE No. (DN Code) Table (Includes All Functions Needed to Perform Applied Control on Site)**

DN	Item	Descrip tion	At shi pment
01	Filter display delay timer	0000: None 0002: 2500H 0004: 10000H 0001: 150H 0003: 5000H	According to type
02	Dirty state of filter	0000: Standard 0001: High degree of dirt (Half of standard time)	0000: Standard
03	Central control address	0001: No.1 unit to 0064: No.64 unit 0099: Unfixed	0099: Unfixed
04	Specific indoor unit priority	0000: No priority 0001: Priority	0000: No priority
06	Heating temp shift	0000: No shift 0002: +2°C(+3.6°F) to 0001: +1°C(+1.8°F) 0010: +10°C(+18°F) (Up to +6 recommended)	0002: +2°C(+3.6°F) (Floor type 0000: 0°C)

\*1 Default value stored in EEPROM mounted on service P.C. board

## 7-4. Applied Control in Indoor Unit

### ■ Remote location ON/OFF control box (TCB-IFCB-4UL)

#### [Wiring and setup]

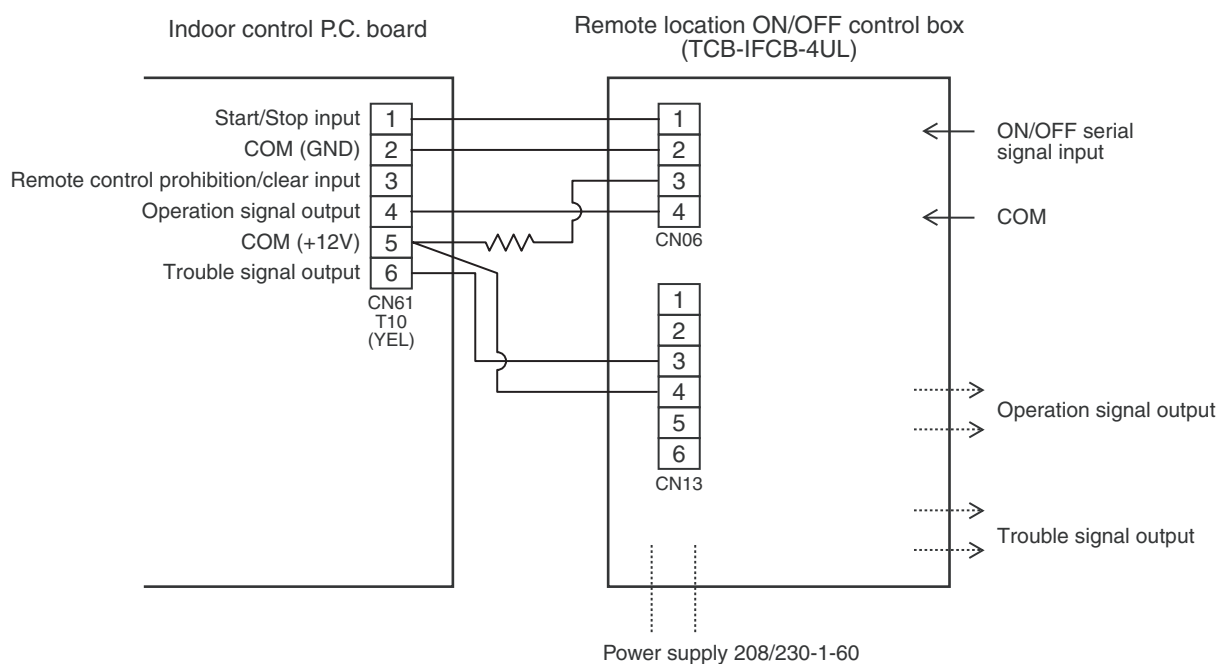

- Use the exclusive connector for connection with the indoor control P.C. board.
- In a group control, the system can operate when connecting with any indoor unit (Control P.C. board) in the group. However when taking out the operation/trouble signal from the other unit, it is necessary to take out from each unit individually.

#### 1. Control items

- 1) Start/Stop input signal : Operation start/stop in unit
- 2) Operation signal : Output during normal operation
- 3) Trouble signal : Output during alarm  
(Serial communication trouble or indoor/outdoor protective device) operation

#### 2. Wiring diagram using remote control interface (TCB-IFCB-4UL)

Input IFCB-4UL : No voltage ON/OFF serial signal  
Output No voltage contact for operation, trouble display  
Contact capacity: Below Max. AC240V 0.5A

## Ventilating fan control from remote control

### [Function]

- The start/stop operation can be operated from the wired remote control when air to air heat exchanger or ventilating fan is installed in the system.
- The fan can be operated even if the indoor unit is not operating.
- Use a fan which can receive the no-voltage A contact as an outside input signal.
- In a group control, the units are collectively operated and they can not be individually operated.

### 1. Operation

Handle a wired remote control in the following procedure.

- \* Use the wired remote control when turning off the system.
- \* Be sure to set up the wired remote control to the header unit. (Same in group control)
- \* In a group control, if the wired remote control is set up to the header unit, both header and follower units are simultaneously operable.

#### 1 Push concurrently + + buttons for 4 seconds or more.

The unit No. displayed firstly indicates the header indoor unit address in the group control.  
In this time, the fan of the selected indoor unit turns on.

#### 2 Every pushing button (button of left side), the indoor unit numbers in group control are displayed successively.

In this time, the fan of the selected indoor unit only turns on.

#### 3 Using the temperature setup / button, specify the CODE No. 31.

#### 4 Using the timer time / button, select the SET DATA. (At shipment: 0000)

The setup data are as follows:

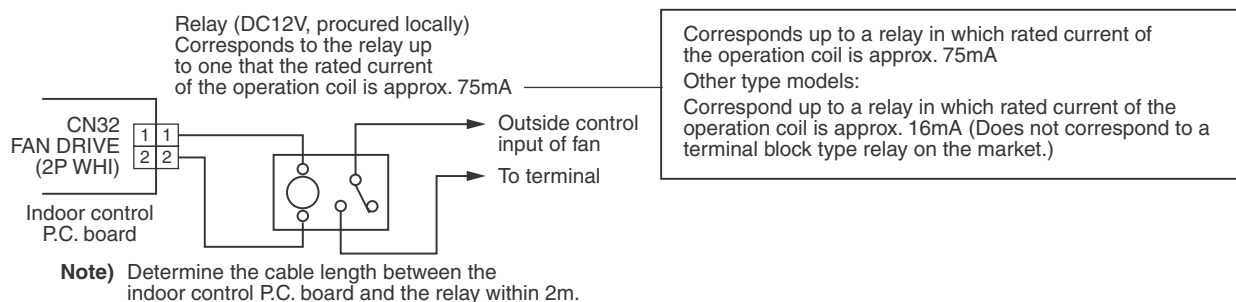

SET DATA	Handling of operation of air to air heat exchanger or ventilating fan
0000	Unavailable (At shipment)
0001	Available

#### 5 Push button. (OK if display goes on.)

- To change the selected indoor unit, go to the procedure 2).
- To change the item to be set up, go to the procedure 3).

#### 6 Pushing returns the status to the usual stop status.

## 2. Wiring

## ■ Leaving-ON prevention control

### [Function]

- This function controls the indoor units individually. It is connected with cable to the control P.C. board of the indoor unit.
- In a group control, it is connected with cable to the indoor unit (Control P.C. board), and the CODE No. 2E is set to the connected indoor unit.
- It is used when the start operation from outside is unnecessary but the stop operation is necessary.
- Using a card switch box, card lock, etc, the indoor unit can be protected if it is forgotten to be turned off.
- When inserting a card, start/stop operation from the remote control is allowed.
- When taking out a card, the system stops if the indoor unit is operating and start/stop operation from the remote control is forbidden.

### 1. Control items

- 1) Outside contact ON : The start/stop operation from the remote control is allowed.  
(Status that card is inserted in the card switch box)
- 2) Outside contact OFF: If the indoor unit is operating, it is forced to stop.  
(Start/Stop prohibited to remote control)  
(Status that card is taken out from the card switch box)

\* When the card switch box does not perform the above contact operation, convert it using a relay with b contact.

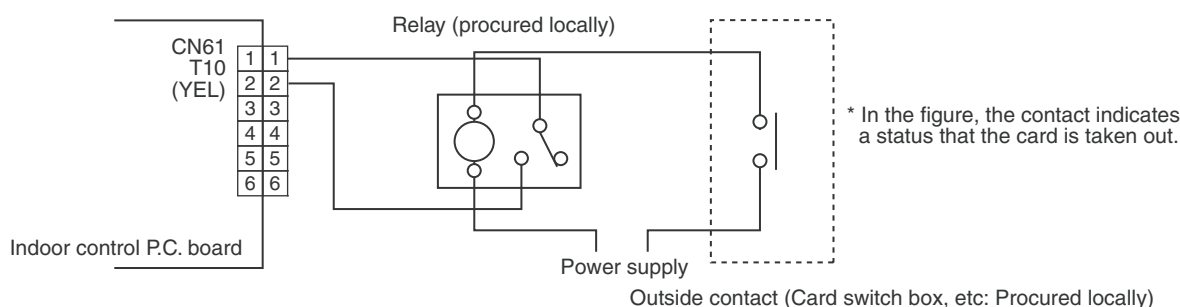

### 2. Operation

Handle the wired remote control switch in the following procedure.

\* Use the wired remote control switch when the system is being turned off.

- 1 Push concurrently  +  +  buttons for 4 seconds or more.**
- 2 Using the temperature setup  /  button, specify the CODE No. 2E .**
- 3 Using the timer time  /  button, set 000 1 to the setup data.**
- 4 Push  button.**
- 5 Push  button. (The status returns to the usual stop status.)**

### 3. Wiring

## ■ Power peak-cut from indoor unit

When the relay is turned on, a forced thermostat-OFF operation starts.

## ■ Address setup (Manual setting from Wired remote control)

In case that addresses of the indoor units will be determined prior to piping work after wiring work

- Set an indoor unit per a remote control.
- Turn on power supply.

**1** Push **SET** + **CL** + **TEST** buttons simultaneously for 4 seconds or more.

**2** (Line address)  
Using the temperature setup **▼** / **▲** buttons, set **12** to the CODE No.

**3** Using timer time **▼** / **▲** buttons, set the line address.

**4** Push **SET** button. (OK when display goes on.)

**5** (Indoor unit address)  
Using the temperature setup **▼** / **▲** buttons, set **13** to the CODE No.

**6** Using timer time **▼** / **▲** buttons, set 1 to the line address.

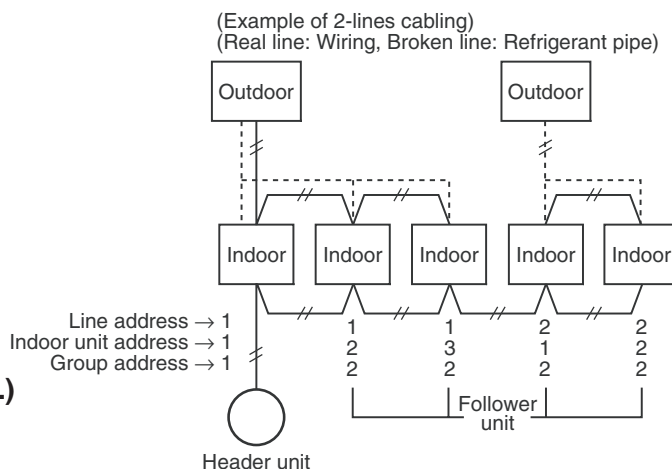

**7** Push **SET** button. (OK when display goes on.)

**8** (Group address)  
Using the temperature setup **▼** / **▲** buttons, set **14** to the CODE No.

**9** Using timer time **▼** / **▲** buttons, set **0000** to Individual, **0001** to Header unit and **0002** to follower unit.

**10** Push **SET** button.  
(OK when display goes on.)

**11** Push **TEST** button.  
Setup completes.  
(The status returns to the usual stop status.)

For the above example, perform setting by connecting singly the wired remote control without remote control inter-unit cable.

Group address  
Individual : 0000  
Header unit : 0001  
Follower unit : 0002 } In case of group control

<Operation procedure>

**1 → 2 → 3 → 4 → 5 → 6 →  
7 → 8 → 9 → 10 → 11 END**

### Note 1)

When setting the line address from the remote control, do not use Address 29 and 30.

As they are addresses which cannot be set to the outdoor unit, if they are set, the check code [E04] (Indoor/Outdoor communication circuit trouble) is issued.

### Note 2)

When an address was manually set from the remote control and the central control over the refrigerant lines is carried out, perform the following setting for the Header unit of each line.

- Set the line address for every line using SW13 and 14 on the interface P.C. board of the Header unit in each line.
- Except the least line address No., turn off SW30-2 on the interface P.C. board of the Header units in the lines connected to the identical central control.  
(Draw the terminal resistances of indoor/outdoor and central control line wirings together.)
- For each refrigerant line, connect the relay connector between Header unit [U1U2] and [U3U4] terminals.
- After this set the central control address.  
(For setting of the central control address, refer to the Installation manual for the central control equipment.)

## ■ Confirmation of indoor unit No. position

### 1. To know the indoor unit addresses though position of the indoor unit is recognized

- In case of individual operation (Wired remote control : indoor unit = 1 : 1)  
(Follow to the procedure during operation)

#### <Procedure>

**1** Push  button (button of left side) if the unit stops.

**2** Push  button (button of left side).

Unit No. 1-1 is displayed on LCD.

(It disappears after several seconds.)

The displayed unit No. indicate line address and indoor unit address.

(When other indoor units are connected to the identical remote control (Group control unit), other unit numbers are also displayed every pushing  button (button of left side).

#### <Operation procedure>

**1 → 2** END

### 2. To know the position of indoor unit by address

- To confirm the unit No. in the group control  
(Follow to the procedure during operation) (in this procedure, the indoor units in group control stop.)

#### <Procedure>

The indoor unit numbers in the group control are successively displayed, and fan, louver, and drain pump of the corresponding indoor unit are turned on.  
(Follow to the procedure during operation)

**1** Push  and  buttons simultaneously for 4 seconds or more.

- Unit No. is displayed.
- Fans of all the indoor units in the group control operate.

**2** Every pushing  button (button of left side), the unit numbers in the group control are successively displayed.

- The unit No. displayed at the first time indicates the master unit address.
- Fan of the selected indoor unit only operate.

**3** Push  button to finish the procedure.  
All the indoor units in the group control stop.

#### <Operation procedure>

**1 → 2 → 3** END

## ■ How to check all the unit No. from an arbitrary wired remote control

<Procedure> Carry out this procedure when the system is turned off.

The indoor unit No. and the position in the identical refrigerant piping can be checked.

An outdoor unit is selected, the identical refrigerant piping and the indoor unit No. are displayed one after the other, and then its fan is on.

- 1 Push the timer time button  +  simultaneously for 4 seconds or more.  
First line 1 and CODE No. **RC** (Address Change) are displayed. (Select outdoor unit.)

- 2 Select line address using  /  button.

- 3 Determine the selected line address using  button.

- The address of the indoor unit connected to the refrigerant piping of the selected outdoor unit is displayed and the fan is on.

- 4 Every pushing  button (button of left side), the indoor unit No. in the identical piping is displayed one after the other.
- Only fan of the selected indoor unit start operation.

[To select the other line address]

- 5 Push  button and the operation returns to Procedure 2.

- \* The indoor address of other line can be continuously checked.

- 6 Push  button and then the procedure finishes.

<Operation procedure>

**1 → 2 → 3 → 4 → 5 → 6 END**

## ■ How to change an indoor unit address by using a wired remote control

Use this method to change the address of indoor units (one to one or group control) that have had the original address set automatically.

This procedure must be done while the units are not operating.

- 1 Simultaneously push and hold the , , and  buttons for more than 4 seconds. If there are 2 or more units in a group, the first "UNIT No." indicated is the header unit.

- 2 Push the  button (button of left side) repeatedly to select an indoor unit address to change. If 2 or more units are controlled in a group the fan of the selected unit will be energized.

- 3 Push the  /  buttons repeatedly to select  for CODE No.

- 4 Push the  /  buttons repeatedly to change the value indicated in the SET DATA section.

- 5 Push the  button, to save address.

- 6 Push the  button (button of left side) repeatedly to select another indoor unit addresses to change. Repeat steps 4 through 6 to continue changing indoor unit address and make each of them unique.

- 7 Push the  button (button of left side) to review/confirm the revised addresses.

- 8 If the addresses have been changed correctly, push the  button to finish the procedure.

## ■ How to change all indoor addresses from an arbitrary wired remote control

(It is possible when setting has finished by automatic addresses.)

**Contents:** The indoor unit addresses in each identical refrigerant piping line can be changed from an arbitrary wired remote control.

### ⊙ Enter in address check/change mode and then change the address.

<Procedure> Carry out this procedure during stop of system.

- 1** Push the timer time button + simultaneously for 4 seconds or more.  
First line 1 and CODE No. **AC** (Address Change) are displayed.

- 2** Select line address using / button.

- 3** Push the button.

- The address of the indoor unit connected to the refrigerant piping of the selected outdoor unit is displayed and the fan is on.  
First the current indoor address is displayed.  
(Line address is not displayed.)

- 4** button push up/down the indoor address of the SET DATA.

The set data is changed to a new address.

- 5** Push button to determine the set data.

- 6** Every pushing button (button of left side), the indoor unit No. in the identical piping is displayed one after the other.

- Only fan of the selected indoor unit start operation.  
Repeat the Procedures 4 to 6 to change all the indoor addresses so that they are not duplicated.

- 7** Push button.  
(All the indications of LCD go on.)

- 8** Push button and then the procedure finishes.

If the UNIT No. is not called up here, the outdoor unit in that line does not exist.

Push button to select a line again in the Procedure 2.

<Operation procedure>

**1 → 2 → 3 → 4 → 5 →  
6 → 7 → 8 END**

## ■ Function to clear trouble

### 1. Clearing method from remote control

#### ⊙ How to clear trouble of outdoor unit

The currently detected check code of the outdoor unit is cleared by using the service monitor function of the remote control. (Check code of the indoor unit is not cleared.)  
(Only the check code of the outdoor unit in one refrigerant line system is cleared.)

#### <Method>

- 1** Push + buttons simultaneously for 4 seconds or more to change the mode to service monitor mode.
  - 2** Push button to set the item code to [FF].
  - 3** The display of A part in the following figure is counted as “0005” → “0004” → “0003” → “0002” → “0001” → “0000” with 5-seconds interval.  
When “0000” appear, the check code was cleared.
- \* However counting from “0005” is repeated on the display screen.

#### <Operation procedure>

**1 → 2 → 3 → 4**

Returns to normal status

- 4** When pushing button, the status becomes normal.

#### ⊙ How to clear check code of indoor unit

The check code of indoor unit is cleared by button of the remote control.  
(Only check code of the indoor unit connected with remote control to be operated is cleared.)

## ■ Monitoring function of remote control switch

When using the remote control (Model Name: RBC-AMT32UL), the following monitoring function can be utilized.

### Calling of display

#### <Contents>

The temperature of each sensor of the remote control, indoor unit and outdoor unit and the operating status can be checked by calling the service monitor mode from the remote control.

#### <Procedure>

- 1 Push  +  buttons simultaneously for 4 seconds or more to call up the service monitor mode.  
The service monitor goes on and firstly the temperature of the CODE No.  is displayed.

- 2 Push  button to change CODE No. (CODE No.) to the CODE No. to be monitored.  
For display code, refer to the following table.

- 3 Push  button (button of left side) to change to item to be monitored.  
The sensor temperature of indoor unit or outdoor unit in its refrigerant line and the operating status are monitored.

- 4 Push  button to return the status to the normal display.

<Operation procedure>

**1 → 2 → 3 → 4**

< Based on the SMMS-e >

	CODE No.	Data name	Display format	Unit	Remote control display example

	CODE No.	Data name	Display format	Unit	Remote control display example
Outdoor unit individual data 3 *5	90	Heating/cooling recovery controlled	0: Normal		[0010]=Heating recovery controlled
	91	Pressure release	0: Normal		[0010]=Pressure release controlled
	92	Discharge temperature release	1: Release controlled		[0001]=Discharge temperature release controlled
	93	Follower unit release (U2/U3 outdoor units)			[0100]=U2 outdoor unit release controlled

\*1 Only a part of indoor unit types is installed with the discharge air temperature sensor. This temperature is not displayed for other types.

\*2 When the units are connected to a group, data of the header indoor unit only can be displayed.

\*3 The first digit of an CODE No. indicates the outdoor unit number.

\*4 The upper digit of an CODE No. -4 indicates the outdoor unit number.

1\*, 5\* ... U1 outdoor unit (Header unit)

2\*, 6\* ... U2 outdoor unit (Follower unit 1)

3\*, 7\* ... U3 outdoor unit (Follower unit 2)

\*5 Only the CODE No. 9\* of U1 outdoor unit (Header unit) is displayed.

## ■ Changing of settings for Celsius display

- Push ON / OFF button if the unit stops.

### Procedure 1

Push simultaneously  +  +  buttons for 4 seconds or more.

After a while, the display part flashes as shown right. Check the displayed CODE No. is [10].

- When the CODE No. is other than [10], push TEST button to erase the display and repeat procedure from the first step. (After pushing TEST button, operation of the remote control is not accepted for approx. 1 minute.)

(For a group control, No. of the firstly displayed indoor unit becomes the header unit.)

### Procedure 2

Every time the button is pushed,  (button at left side), the indoor unit No. in the group control is displayed in order. Select the indoor unit of which setup is changed.

In this time, the position of the indoor unit of which setup is changed can be confirmed because fan of the selected indoor unit will operate.

### Procedure 3

1. Using temp. setup  buttons, specify CODE No. [33].  
(CODE No. [33]: Fahrenheit display)
2. Using timer  buttons, change the line address from [0001] to [0000]
3. Push  button. In this time, the setup finishes when the display changes from flashing to lighting.

### Procedure 4

After verifying the content change, push  button. (Setup is determined.)

When pushing  button, the display disappears and the status becomes the usual stop status.

(When pushing  button the operation from the remote control is not accepted for approx. 1 minute.)

- If the operation from the remote control is not accepted after 1 minute of pushing the  button, it is considered that the address setup is incorrect. In this case, the automatic address must be set up again.  
When changing the settings from Celsius to Fahrenheit follow the reverse order of the above procedure.

## 8. TROUBLESHOOTING

### 8-1. Overview

#### (1) Before engaging in troubleshooting

##### (a) Applicable models

All Super Module Multi (SMMS-i, SMMS-e, SHRM-e) models.  
(Indoor units: MM\*-AP\*\*\*, Outdoor units: MMY-MAP\*\*\*)

##### (b) Tools and measuring devices required

- Screwdrivers (Philips, flat head), spanners, long-nose pliers, nipper, pin to push reset switch, etc.
- Multimeter, thermometer, pressure gauge, etc.

##### (c) Things to check prior to troubleshooting (behaviors listed below are normal)

NO.	Behavior	Possible cause
1	A compressor would not start	<ul style="list-style-type: none"> <li>• Could it just be the 3-minute delay period (3 minutes after compressor shutdown)?</li> <li>• Could it just be the air conditioner having the thermostat set to OFF?</li> <li>• Could it just be the air conditioner operating in fan mode or put on the timer?</li> <li>• Could it just be the system going through initial communication?</li> </ul>
2	An indoor fan would not start	<ul style="list-style-type: none"> <li>• Could it just be cold air discharge prevention control, which is part of heating?</li> </ul>
3	An outdoor fan would not start or would change speed for no reason	<ul style="list-style-type: none"> <li>• Could it just be cooling operation under low outside temperature conditions?</li> <li>• Could it just be defrosting operation?</li> </ul>
4	An indoor fan would not stop	<ul style="list-style-type: none"> <li>• Could it just be the elimination of residual heat being performed as part of the air conditioner shutdown process after heating operation?</li> </ul>
5	The air conditioner would not respond to a start/stop command from a remote control	<ul style="list-style-type: none"> <li>• Could it just be the air conditioner operation under external or remote control?</li> </ul>

#### (2) Troubleshooting procedure

When a trouble occurs, proceed with troubleshooting in accordance with the procedure shown below.

### NOTE

Rather than a genuine trouble (see the List of Check Codes below), the problem could have been caused by a microprocessor malfunction attributable to a poor quality of the power source or an external noise. Check for possible noise sources, and shield the remote control wiring and signal wires as necessary.

## 8-2. Troubleshooting Method

The remote controls (main remote control and central control remote control) and the interface P.C. board of an outdoor unit are provided with an LCD display (remote control) or a 7-segment display (outdoor interface P.C. board) to display operational status. Using this self-diagnosis feature, the problem may be identified in the event of a problem by following the method described below.

The list below summarizes check codes detected by various devices. Analyze the check code according to where it is displayed and work out the nature of the problem in consultation with the list.

- When investigating a problem on the basis of a display provided on the indoor remote control or TCC-LINK central control remote control - See the “TCC-LINK remote control or main remote control display” section of the list.
- When investigating a problem on the basis of a display provided on an outdoor unit - See the “Outdoor 7-segment display” section of the list.
- When investigating a problem on the basis of a wireless remote control-controlled indoor unit - See the “Light sensor indicator light block” section of the list.

### List of Check Codes (Indoor Unit)

(Check code detected by indoor unit)

IPDU: Intelligent Power Drive Unit (Inverter P.C. board)

○ : Lighting, ◎ : Flashing, ● : Goes off

ALT.: Flashing is alternately when there are two flashing LED

SIM: Simultaneous flashing when there are two flashing LED

Check code			Display of receiving unit				Typical problem site	Description of Check code
TCC-LINK central control or main remote control display	Outdoor 7-segment display		Indicator light block					
		Sub-code	Operation 	Timer 	Ready 	Flash		
E03	—	—					Indoor-remote control periodic communication trouble	Communication from remote control or network adaptor has been lost (so has central control communication).
E04	—	—					Indoor-outdoor periodic communication trouble	Signals are not being received from outdoor unit.
E08	E08	Duplicated indoor address					Duplicated indoor address	Indoor unit detects address identical to its own.
E10	—	—					Indoor inter-MCU communication trouble	MCU communication between main control and motor microcontroller is faulty.
E18	—	—					Trouble in periodic communication between indoor header and follower unit	Periodic communication between indoor header and follower units cannot be maintained.
F01	—	—				ALT	Indoor heat exchanger temperature sensor (TCJ) trouble	Heat exchanger temperature sensor (TCJ) has been open/short-circuited.
F02	—	—				ALT	Indoor heat exchanger temperature sensor (TC2) trouble	Heat exchanger temperature sensor (TC2) has been open/short-circuited.
F03	—	—				ALT	Indoor heat exchanger temperature sensor (TC1) trouble	Heat exchanger temperature sensor (TC1) has been open/short-circuited.
F10	—	—				ALT	Room air temperature sensor (TA/TSA) trouble	Room air temperature sensor (TA) has been open/short-circuited.
F11	—	—				ALT	Discharge air temperature sensor (TF/TFA) trouble	Discharge air temperature sensor (TF) has been open/short-circuited.
F17	—	—				ALT	Outside air suction temperature sensor (TOA) trouble	Open/Short of outside air suction temperature sensor (TOA) was detected.
F18	—	—				ALT	Indoor air suction temperature sensor (TRA) trouble	Discharge air temperature sensor (TF) has been open/short-circuited.
F29	—	—				SIM	P.C. board or other indoor trouble	Open/Short of indoor air suction temperature sensor (TRA) was detected.
L03	—	—				SIM	Duplicated indoor group header unit	There is more than one header unit in group.
L07	—	—				SIM	Connection of group control cable to stand-alone indoor unit	There is at least one stand-alone indoor unit to which group control cable is connected.
L08	L08	—				SIM	Indoor group address not set	Address setting has not been performed for one or more indoor units (also detected at outdoor unit end).
L09	—	—				SIM	Indoor capacity not set	Capacity setting has not been performed for indoor unit.
L20	—	—				SIM	Duplicated central control address	There is duplication in central control address setting.
L30	L30	Detected indoor unit No.				SIM	Indoor external trouble input (interlock)	Unit shutdown has been caused by external trouble input (CN080).
P01	—	—				ALT	Indoor AC fan trouble	Indoor AC fan trouble is detected (activation of fan motor thermal relay).
P10	P10	Detected indoor unit No.				ALT	Indoor overflow trouble	Float switch has been activated.
P12	—	—				ALT	Indoor DC fan trouble	Indoor DC fan trouble (e.g. over current or lock-up) is detected.
P31	—	—				ALT	Other indoor unit trouble	Follower unit cannot be operated due to header unit alarm (E03/L03/L07/L08).

(Trouble detected by main remote control)

Check code			Display of receiving unit				Typical fault site	Description of trouble
Main remote control	Outdoor 7-segment display		Indicator light block					
		Sub-code	Operation 	Timer 	Ready 	Flash		
E01	—	—					No master remote control, faulty remote control communication (reception)	Signals cannot be received from indoor unit; master remote control has not been set (including two remote control).
E02	—	—					Faulty remote control communication (transmission)	Signals cannot be transmitted to indoor unit.
E09	—	—					Duplicated master remote control	Both remote controls have been set as master remote control in two remote control (alarm and shutdown for header unit and continued operation for follower unit)

(Trouble detected by central control device)

Check code			Display of receiving unit				Typical fault site	Description of trouble
TCC-LINK central control	Outdoor 7-segment display		Indicator light block					
		Sub-code	Operation 	Timer 	Ready 	Flash		
C05	—	—	No indication (when main remote control also in use)				Faulty central control communication (transmission)	Central control device is unable to transmit signal due to duplication of central control device
C06	—	—					Faulty central control communication (reception)	Central control device is unable to receive signal.
—	—	—					Multiple network adapters	Multiple network adapters are connected to remote control communication line.
C12	—	—	—				Blanket alarm for general-purpose device control interface	Device connected to general-purpose device control interface for TCC-LINK is faulty.
P30	—	—	As per alarm unit (see above)				Group control follower unit trouble	Group follower unit is faulty (unit No. and above detail [    ] displayed on main remote control)

**Note:** The same trouble, e.g. a communication trouble, may result in the display of different check codes depending on the device that detects it.  
Moreover, check codes detected by the main remote control/central control device do not necessarily have a direct impact on air conditioner operation.

## List of Check Codes (Outdoor Unit)

(Check code detected by SMMS-e outdoor interface - typical examples)

If "HELLO" is displayed on the outdoor 7-segment for 1 minute or more, turn off the power supply once and then turn on the power supply again after 30 seconds or more. When the same symptom appears, it is considered there is a possibility of I/F board trouble.

IPDU: Intelligent Power Drive Unit (Inverter P.C. board)

○ : Lighting, ◎ : Flashing, ● : Goes off

ALT.: Flashing is alternately when there are two flashing LED

SIM: Simultaneous flashing when there are two flashing LED

F16	—	F16				ALT	Outdoor pressure sensor (Pd, Ps) wiring trouble	Wiring trouble in outdoor pressure sensors (Pd, Ps) has been detected.
F23	—	F23				ALT	Low pressure sensor (Ps) trouble	Output voltage of low pressure sensor (Ps) is zero.
F24	—	F24				ALT	High pressure sensor (Pd) trouble	Output voltage of high pressure sensor (Pd) is zero or provides abnormal readings when compressors have been turned off.
F31	—	F31				SIM	Outdooe EEPROM trouble	Outdoor EEPROM is faulty (alarm and shutdown for header unit and continued operation for follower unit)
H05	—	H05					Outdoor discharge temperature sensor (TD1) wiring trouble	Wiring/installation trouble or detachment of outdoor discharge temperature sensor (TD1) has been detected
H06	—	H06					Activation of low-pressure protectio	Low pressure (Ps) sensor detects abnormally low operating pressure.
H07	—	H07					Low oil level protection	Temperature sensor for oil level detection (TK1,TK2,TK4,TK5) detects abnormally low oil level.
H08	01: TK1 sensor trouble 02: TK2 sensor trouble 04: TK4 sensor trouble 05: TK5 sensor trouble	H08					Trouble in temperature sensor for oil level detection (TK1,TK2,TK4,TK5)	Temperature sensor for oil level detection (TK1,TK2,TK4,TK5) has been open/short-circuited.
H15	—	H15					Outdoor discharge temperature sensor (TD2) wiring trouble	Wiring/installation trouble or detachment of outdoor discharge temperature sensor (TD2) has been detected.
H16	01: TK1 oil circuit trouble 02: TK2 oil circuit trouble 04: TK4 oil circuit trouble 05: TK5 oil circuit trouble	H16					Oil level detection circuit trouble	No temperature change is detected by temperature sensor for oil level detection (TK1,TK2,TK4,TK5) despite compressor having been started.
L04	—	L04				SIM	Duplicated outdoor refrigerant line address	Identical refrigerant line address has been assigned to outdoor units belonging to different refrigerant piping systems.
L06	Number of priority indoor units (check code L05 or L06 depending on individual unit)	L05				SIM	Duplicated priority indoor unit (as displayed on priority indoor unit)	More than one indoor unit have been set up as priority indoor unit.
		L06				SIM	Duplicated priority indoor unit (as displayed on indoor unit other than priority indoor unit)	More than one indoor unit have been set up as priority indoor unit.
L08	—	(L08)				SIM	Indoor group address not set	Address setting have not been performed for one or more indoor units (also detected at indoor end).
L10	—	L10				SIM	Outdoor capacity not set	Outdoor unit capacity has not been set (after P.C. board replacement).
L17	—	L17				SIM	Outdoor model incompatibility trouble	Old model outdoor unit (prior to 6 series) has been connected.
L23	—	L23				SIM	SW setting mistake	Bit 3 and 4 of SW17 are turning on.
L28	—	L28				SIM	Too many outdoor units connected	More than three outdoor units have been connected.

P29	01: Compressor 1 02: Compressor 2	P29	⊙	●	⊙	ALT	Compressor position detection circuit trouble	Compressor motor position detection trouble is detected.

**Note:** The above check codes are examples only, and different check codes may be displayed depending on the outdoor unit configuration

## 8-3. Troubleshooting Based on Information Displayed on Remote Control

### Using main remote control (RBC-AMT32UL)

#### (1) Checking and testing

When a fault occurs to an air conditioner, a check code and indoor unit No. are displayed on the display window of the remote control.

Check codes are only displayed while the air conditioner is in operation.

If the display has already disappeared, access trouble history by following the procedure described below.

#### (2) Trouble history

The trouble history access procedure is described below (up to four troubles stored in memory).

Trouble history can be accessed regardless of whether the air conditioner is in operation or shut down.

<Procedure> To be performed when system at rest

#### 1 Invoke the SERVICE CHECK mode by pushing the + buttons simultaneously and holding for at least 4 seconds.

The letters "SERVICE CHECK" light up, and the check code "01" is displayed, indicating the trouble history. This is accompanied by the indoor unit No. to which the trouble history is related and a check code.

#### 2 To check other trouble history items, push the or another check code.

Check code "01" Check code "04" (oldest)

Note: Trouble history four items.

#### 3 When the button is pushed, normal display is restored.

### REQUIREMENT

Do not pu button as it would erase the whole trouble history of the indoor unit.

### How to read displayed information

<7-segment display symbols>

0 1 2 3 4 5 6 7 8 9 A b C d E F H J L P

<Corresponding alphanumerical letters>

0 1 2 3 4 5 6 7 8 9 A b C d E F H J L P

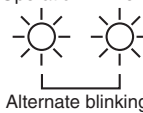

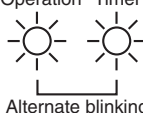

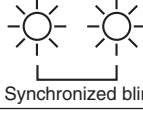

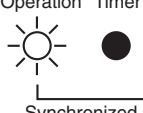

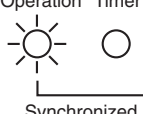

## Using indoor unit indicators (receiving unit light block) (wireless type)

To identify the check code, check the 7-segment display on the header unit. To check for check codes not displayed on the 7-segment display, consult the “List of Check Codes (Indoor Unit)” in “8-2. Troubleshooting Method”.

●: Goes off ○: Lighting ☀: Blinking (0.5 seconds)

Light block	Check code	Cause of fault
Operation   Timer   Ready  Synchronized blinking	—	Test run in progress
Operation   Timer   Ready  Alternate blinking	—	Setting incompatibility (automatic cooling/heating setting for model incapable of it and heating setting for cooling-only model)

## 8-4. Check Codes Displayed on Remote Control and SMMS-e Outdoor Unit (7-Segment Display on I/F Board) and Locations to Be Checked

For other types of outdoor units, refer to their own service manuals.

Main remote control	Check code		Location of detection	Description	System status	Trouble detection condition(s)	Check items (locations)
	Check code	Sub-code					
E01	—	—	Remote control	Indoor-remote control communication trouble (detected at remote control end)	Stop of corresponding unit	Communication between indoor P.C. board and remote control is disrupted.	<ul style="list-style-type: none"> <li>• Check remote control inter-unit tie cable (A/B).</li> <li>• Check for broken wire or connector bad contact.</li> <li>• Check indoor power supply.</li> <li>• Check for defect in indoor P.C. board.</li> <li>• Check remote control address settings (when two remote controls are in use).</li> <li>• Check remote control P.C. board.</li> </ul>
E02	—	—	Remote control	Remote control transmission trouble	Stop of corresponding unit	Signal cannot be transmitted from remote control to indoor unit.	<ul style="list-style-type: none"> <li>• Check internal transmission circuit of remote control.</li> <li>--- Replace remote control as necessary.</li> </ul>
E03	—	—	Indoor unit	Indoor-remote control communication trouble (detected at indoor end)	Stop of corresponding unit	There is no communication from remote control (including wireless) or network adaptor.	<ul style="list-style-type: none"> <li>• Check remote control and network adaptor wiring.</li> </ul>
E04	—	—	Indoor unit	Indoor-outdoor communication circuit trouble (detected at indoor end)	Stop of corresponding unit	Indoor unit is not receiving signal from outdoor unit.	<ul style="list-style-type: none"> <li>• Check order in which power was turned on for indoor and outdoor units.</li> <li>• Check indoor address setting.</li> <li>• Check indoor-outdoor tie cable.</li> <li>• Check outdoor terminating resistor setting (SW30, Bit 2).</li> </ul>
E06	E06	No. of indoor units from which signal is received normally	I/F	Signal lack of indoor unit	All stop	Indoor unit initially communicating normally fails to return signal for specified length of time.	<ul style="list-style-type: none"> <li>• Check power supply to indoor unit. (Is power turned on?)</li> <li>• Check connection of indoor-outdoor communication cable.</li> <li>• Check connection of communication connectors on indoor P.C. board.</li> <li>• Check connection of communication connectors on outdoor P.C. board.</li> <li>• Check for defect in indoor P.C. board.</li> <li>• Check for defect in outdoor P.C. board (I/F).</li> </ul>
—	E07	—	I/F	Indoor-outdoor communication circuit trouble (detected at outdoor end)	All stop	Signal cannot be transmitted from outdoor to indoor units for 30 seconds continuously.	<ul style="list-style-type: none"> <li>• Check outdoor terminating resistor setting (SW30, Bit 2).</li> <li>• Check connection of indoor-outdoor communication circuit.</li> </ul>
E08	E08	Duplicated indoor address	Indoor unit I/F	Duplicated indoor address	All stop	More than one indoor unit are assigned same address.	<ul style="list-style-type: none"> <li>• Check indoor addresses.</li> <li>• Check for any change made to remote control connection (group/individual) since indoor address setting.</li> </ul>
E09	—	—	Remote control	Duplicated master remote control	Stop of corresponding unit	In two remote control configuration (including wireless), both controls are set up as master. (Header indoor unit is shut down with alarm, while follower indoor units continue operating.)	<ul style="list-style-type: none"> <li>• Check remote control settings.</li> <li>• Check remote control P.C. boards.</li> </ul>
E10	—	—	Indoor unit	Indoor inter-MCU communication trouble	Stop of corresponding unit	Communication cannot be established/maintained upon turning on of power or during communication.	<ul style="list-style-type: none"> <li>• Check for defect in indoor P.C. board</li> </ul>
E12	E12	01: Indoor-outdoor communication 02: Outdoor-outdoor communication	I/F	Automatic address starting trouble	All stop	<ul style="list-style-type: none"> <li>• Indoor automatic address setting is started while automatic address setting for equipment in other refrigerant line is in progress.</li> <li>• Outdoor automatic address setting is started while automatic address setting for indoor units is in progress.</li> </ul>	<ul style="list-style-type: none"> <li>• Perform automatic address setting again after disconnecting communication cable to that refrigerant line.</li> </ul>
E15	E15	—	I/F	Indoor unit not found during automatic address setting	All stop	Indoor unit cannot be detected after indoor automatic address setting is started.	<ul style="list-style-type: none"> <li>• Check connection of indoor-outdoor communication line.</li> <li>• Check for trouble in indoor power supply system.</li> <li>• Check for noise from other devices.</li> <li>• Check for power failure.</li> <li>• Check for defect in indoor P.C. board.</li> </ul>

Check code			Location of detection	Description	System status	Trouble detection condition(s)	Check items (locations)
Main remote control	Outdoor 7-segment display						
	Check code	Sub-code					
E16	E16	00: Overloading 01:- No. of units connected	I/F	Too many indoor units connected	All stop	<ul style="list-style-type: none"><li>• Combined capacity of indoor units exceeds 135% of combined capacity of outdoor units.</li></ul> <b>Note:</b> <b>If this code comes up after backup setting for outdoor unit failure is performed, perform “No overloading detected” setting.</b> <“No overloading detected” setting method> Turn on SW09/Bit 2 on I/F P.C. board of outdoor header unit. <ul style="list-style-type: none"><li>• More than 64 indoor units are connected.</li></ul>	<ul style="list-style-type: none"><li>• Check capacities of indoor units connected.</li><li>• Check combined HP capacities of indoor units.</li><li>• Check HP capacity settings of outdoor units.</li><li>• Check No. of indoor units connected.</li><li>• Check for defect in outdoor P.C. board (I/F).</li></ul>
E18	—	—	Indoor unit	Trouble in communication between indoor header and follower units	Stop of corresponding unit	Periodic communication between indoor header and follower units cannot be maintained.	<ul style="list-style-type: none"><li>• Check remote control wiring.</li><li>• Check indoor power supply wiring.</li><li>• Check P.C. boards of indoor units.</li></ul>
E19	E19	00: No header unit 02: Two or more header units	I/F	Trouble in number of outdoor header units	All stop	<ul style="list-style-type: none"><li>• There are more than one outdoor header units in one line.</li><li>• There is no outdoor header unit in one line.</li></ul>	Outdoor header unit is outdoor unit to which indoor/outdoor tie cable (U1,U2) is connected. <ul style="list-style-type: none"><li>• Check connection of indoor-outdoor communication line.</li><li>• Check for defect in outdoor P.C. board (I/F).</li></ul>
E20	E20	01: Connection of outdoor unit from other line 02: Connection of indoor unit from other line	I/F	Connection to other line found during automatic address setting	All stop	Equipment from other line is found to have been connected when indoor automatic address setting is in progress.	Disconnect inter-line tie cable in accordance with automatic address setting method explained in “Address setting” section.
E23	E23	—	I/F	Outdoor/outdoor communication transmission trouble	All stop	Signal cannot be transmitted to other outdoor units for at least 30 seconds continuously.	<ul style="list-style-type: none"><li>• Check power supply to outdoor units. (Is power turned on?)</li><li>• Check connection of tie cables between outdoor units for bad contact or broken wire.</li><li>• Check communication connectors on outdoor P.C. boards.</li><li>• Check for defect in outdoor P.C. board (I/F).</li><li>• Check termination resistance setting for communication between outdoor units.</li></ul>
E25	E25	—	I/F	Duplicated follower outdoor address	All stop	There is duplication in outdoor addresses set manually.	<b>Note:</b> <b>Do not set outdoor addresses manually.</b>
E26	E26	Address of outdoor unit from which signal is not received normally	I/F	Signal lack of outdoor unit	All stop	Outdoor unit initially communicating normally fails to return signal for specified length of time.	<ul style="list-style-type: none"><li>• Backup setting is being used for outdoor units.</li><li>• Check power supply to outdoor unit. (Is power turned on?)</li><li>• Check connection of tie cables between outdoor units for bad contact or broken wire.</li><li>• Check communication connectors on outdoor P.C. boards.</li><li>• Check for defect in outdoor P.C. board (I/F).</li></ul>
E28	E28	Detected outdoor unit No.	I/F	Outdoor follower unit trouble	All stop	Outdoor header unit receives trouble code from outdoor follower unit.	<ul style="list-style-type: none"><li>• Check check code displayed on outdoor follower unit.</li></ul> <Convenient functions> If SW04 is pressed and held for at least 1 second while [E28] is displayed on the 7-segment display of outdoor header unit, the fan of the outdoor unit that has been shut down due to an trouble comes on. If SW04 and SW05 are pressed simultaneously, the fans of normal outdoor units come on. To stop the fan or fans, press SW05 on its own.

## 9. DETACHMENTS

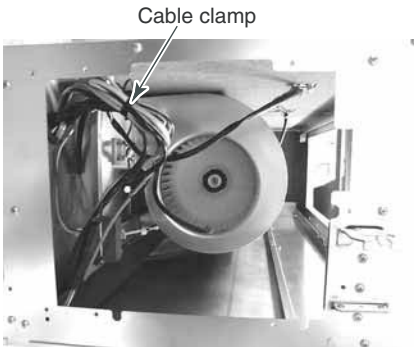

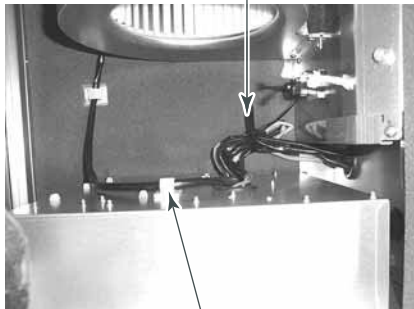

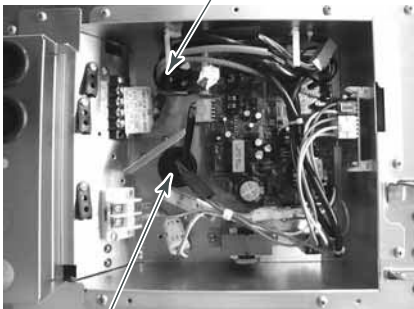

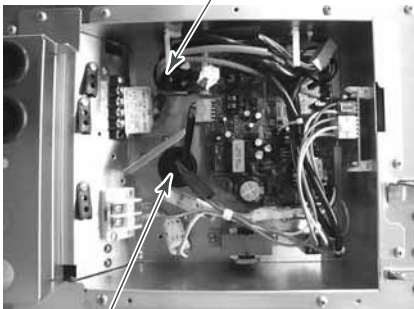

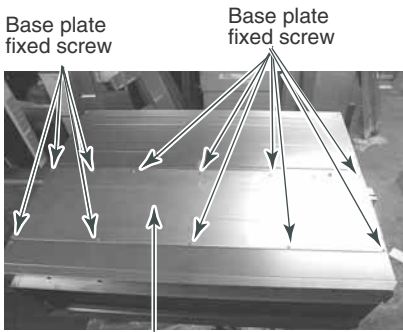

### WARNING

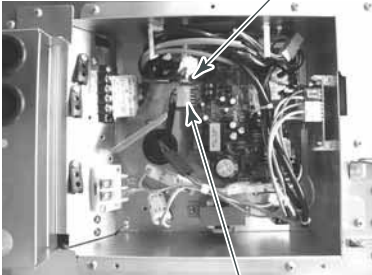

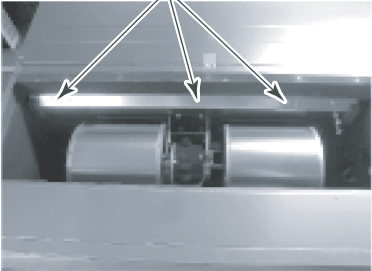

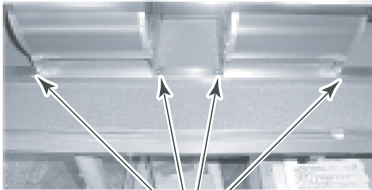

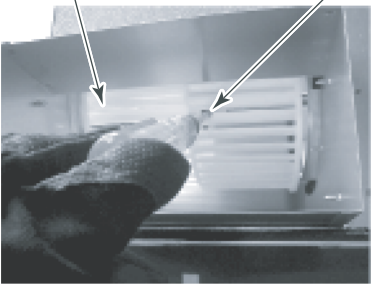

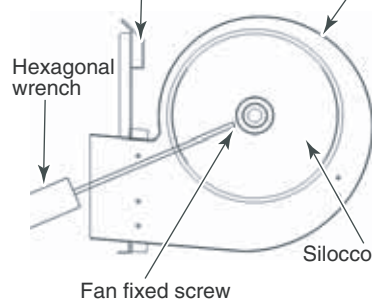

Be sure to turn off the power supply and the breaker and then start a work.

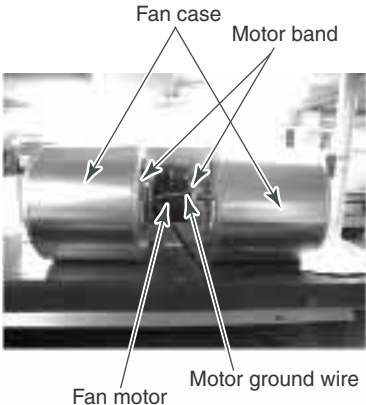

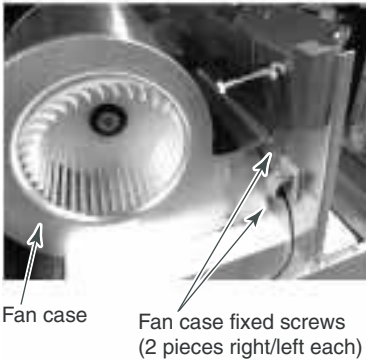

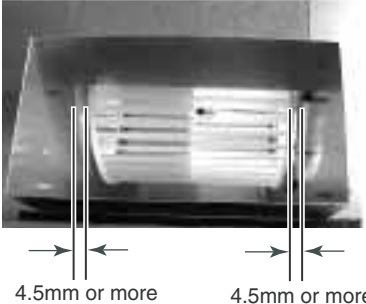

### CAUTION

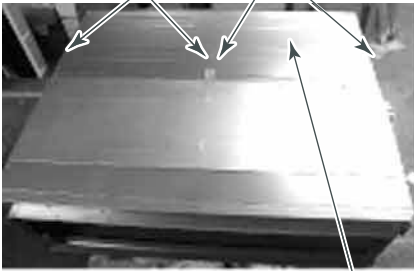

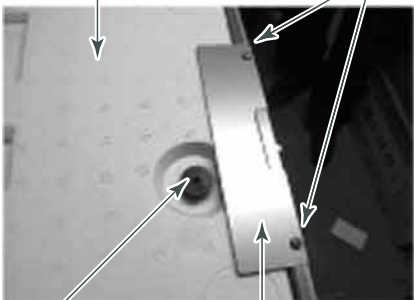

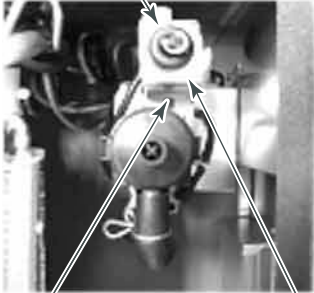

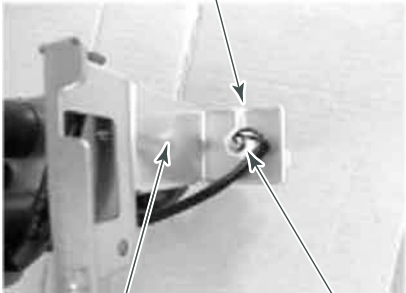

Be sure to put on the gloves at disassembling work; otherwise an injury will be caused by a part, etc.

No.	Part name	Procedure	Remarks
①	Electric parts box	<p><b>1. Detachment</b></p> <p>1) Take off screws of the electric parts box cover to remove the electric parts box cover.</p> <p>Close the claw of the electric parts box cover to notch side of the electric parts box once and then pull out the claw.</p> <p>2) Remove power supply wire, indoor/outdoor connecting wire, remote control wires from each terminal blocks.</p> <p>3) Remove connectors of the fan motor, TC1, TC2, TCJ and TA sensor lead wires from the control P.C. board.</p> <p>Remove relay connectors of the drain pump, float SW, and PMV lead wires.</p> <p><b>NOTE :</b></p> <p>First unlock the housing and then remove the connectors.</p> <p>CN210: Fan motor CN100: TC1 sensor CN101: TC2 sensor CN102: TCJ sensor CN104: TA (Room temperature) sensor</p> <p>4) Take off screw of the conduit fixed plate and then remove the conduit fixing plate.</p> <p>5) Take off fixing screws of the electric parts box and then remove the electric parts box.</p>	<p>Screws (For fixing the electric parts box cover)      Electric parts box cover</p>  <p>Claw of electric parts box cover</p>  <p>PMV relay connector</p> <p>TA sensor      Float SW relay connector      TC1 sensor</p>  <p>Drain pump relay connector      Fan motor      TC2 sensor      TCJ sensor</p> <p>Screw (For fixing conduit fixed plate)      Screws (For fixing electric parts box)</p>  <p>Conduit fixed plate      Electric parts box</p>

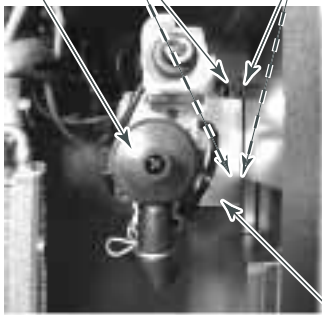

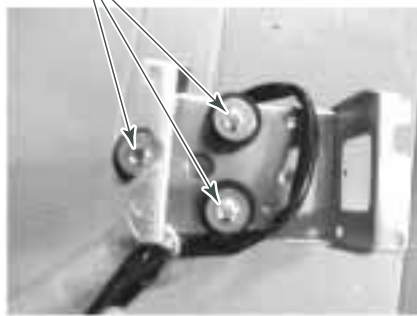

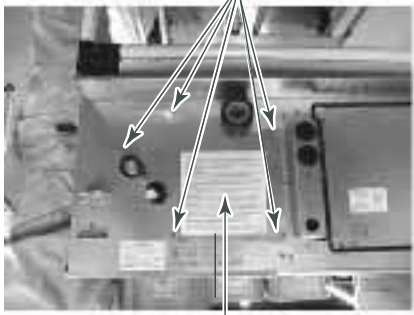

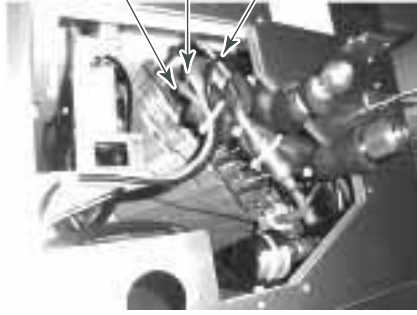

No.	Part name	Procedure	Remarks
		<p><b>* Cautions when attaching the electric parts box</b></p> <p>Using cable clamp, bundle each extra lead wire so that it is not caught in the fan and then attach the electric parts box.</p> <p>After attaching the electric parts box, pull the extra wire in the electric parts box and bundle it with clamp, etc.</p>	 <p>Cable clamp</p>  <p>Cable clamp</p> <p>Cord clamp(For fan motor lead wire)</p>  <p>Intake port of PMV, float SW, TC1, TC2, TCJ and TA sensor lead wires</p>  <p>Intake port of fan motor and drain pump lead wires</p>
②	Silocco fan, fan motor	<p><b>1. Detachment</b></p> <p>1) Take off fixed screws and then remove the base plate.</p>	 <p>Base plate fixed screw</p> <p>Base plate fixed screw</p> <p>Base plate</p>

No.	Part name	Procedure	Remarks
		<p>2) Remove cover of the electric parts box. (Refer to No.① )</p> <p>3) Remove connectors of the fan motor and TA sensor from P.C. board.</p> <p>4) Take off hexagonal screws which fix the fan assembly and the main unit.</p> <p>* For MMD-AP021 to 048, take off also screws which fix the fan case to the top plate</p> <p>5) Remove the fan assembly from the main unit. The fan assembly is fixed by the hooking claw at the upper side of the main unit. Lift up it once and pull downward to remove the hooking claw.</p> <p>6) Insert the hexagonal wrench as shown in the right figure and loosen the fixed screw of the Silocco fan.</p>	 <p>TA sensor connector</p> <p>Fan motor connector</p>  <p>Hexagonal screws (For fixing the fan assembly and the main unit)</p> <p><b>* For MMD-AP021 to 048 only</b></p>  <p>Fan case fixed screws</p>  <p>Silocco fan</p> <p>Fan fixed screw</p>  <p>Fan base</p> <p>Fan case</p> <p>Hexagonal wrench</p> <p>Fan fixed screw</p> <p>Silocco fan</p>

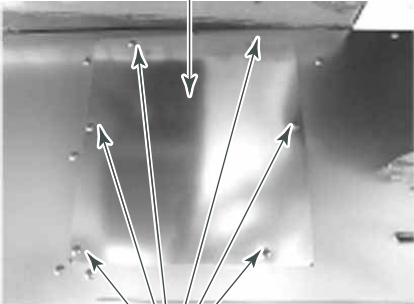

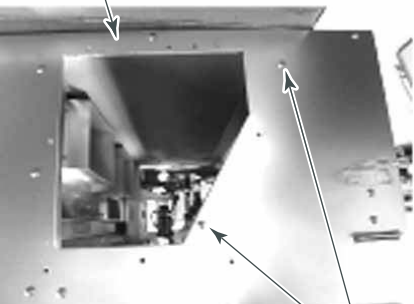

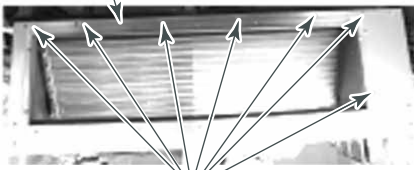

No.	Part name	Procedure	Remarks
		<p>7) Take off screws of the motor band and the motor ground wire.</p> <p>8) Take off the fan case fixed screws and then pull out the fan case from the fan base.</p> <p>9) Remove cover of the fan case.</p> <p>10) Remove the Silocco fan.</p> <p><b>* Cautions when attaching the Silocco fan</b>  <b>Attach the Silocco fan in the reverse procedure of detachment</b></p> <p>1) Place the Silocco fan in the arrow direction ! as shown in the right figure.</p> <p>2) Adjust position so that clearance between the Silocco fan and the fan case becomes even and then fix the fan.</p>	    

No.	Part name	Procedure	Remarks
③	Drain pan	<p><b>1. Detachment</b></p> <p>1) Take off fixed screws for the base plate to remove the base plate from the main unit.</p> <p>2) Prepare a water receiver; take off the drain cap and then extract drain water accumulated in the drain pan.</p> <p><b>NOTE :</b></p> <hr/> <p>When taking-off the drain cap, be sure receive drain water using a bucket, etc.</p> <hr/> <p>3) Take off screws of the drain pan fixed plate to remove the drain pan fixed plate.  MMD-AP007 to AP012: none  MMD-AP015 to AP018: 1 position  MMD-AP021 to AP048: 2 positions</p> <p>4) Remove the drain pan from the main unit.</p>	<p>Fixed screws for the base plate</p>  <p>Base plate</p> <p>Drain pan</p> <p>Screw</p>  <p>Drain cap</p> <p>Drain pan fixed plate</p>
④	Float switch	<p><b>1. Detachment</b></p> <p>1) Remove the drain pan.  (Refer to No.③ )</p> <p>2) Take off screws of the float switch fixed plate.</p> <p>3) Remove the plastic nut for fixing the float switch.</p> <p>4) Remove the float switch.</p>	<p>Float switch</p>  <p>Fixed screws for the float switch</p> <p>Float switch fixed base</p> <p>Float switch (Viewed from opposite side)</p>  <p>Float switch fixed base</p> <p>Plastic nut</p>

No.	Part name	Procedure	Remarks
⑤	Drain pump	<b>1. Detachment</b> 1) Remove the drain pan.(Refer to No.③ )  2) Take off screws for the fixed plate of the main unit and the pump. (4 positions)  3) Take off screws of the drain pump fixed plate to remove the drain pump.	<p>Fixing screws of the drain pump fixed plate (4 positions)</p> <p>Drain pump</p>  <p>Drain pump fixed plate</p> <p>Screws for fixing drain pump</p> 
⑥	TC1, TC2, TCJ sensors	<b>1. Detachment</b> 1) Take off fixing screw for the check port cover at right side. (5 positions)  2) Pull and take off the sensors from the sensor holder of piping.	<p>Mounting screws for check port cover</p>  <p>Check port cover (A)</p> <p>TC1 sensor Tube color: Blue</p> <p>TCJ sensor Tube color: Red</p> <p>TC2 sensor Tube color: Black</p> 

No.	Part name	Procedure	Remarks
⑦	Heat exchanger	<p><b>1. Detachment</b></p> <p><b>NOTE :</b></p> <hr/> <p>Recover refrigerant gas and then remove the refrigerant piping of the indoor unit. Remove the indoor unit and carry out the work on the floor. etc.</p> <hr/> <p>1) Remove the drain pan.(Refer to No.③ )</p> <p>Remove TC1 sensor, TC2 sensor and TCJ sensor from the sensor holder. Remove the relay connector of PMV lead wire in the electric parts and then pull off it from the bushing.</p> <p>2) Remove the check port cover (A). (Refer to No.⑥ )</p> <p>3) Take off fixing screw and remove cover (B).</p> <p>4) Take off the heat exchanger fixing screws (2 positions) which fix the side plate (Left) and the heat exchanger.</p> <p>5) Take off screws which fix the main unit (Front side) and the heat exchanger to remove the heat exchanger.</p>	<p>Check port cover (B)</p>  <p>Check port cover fixing screws</p> <p>Side plate (Left)</p>  <p>Heat exchanger fixing screws</p> <p>Main unit (Front side)</p>  <p>Heat exchanger fixing screws (Front side)</p>

## 10. P.C. BOARD EXCHANGE PROCEDURES

### 10-1. Medium Static Ducted Type

In the non-volatile memory (Hereinafter said EEPROM, IC10) installed on the indoor P.C. board before replacement, the type and capacity code exclusive to the corresponding model have been stored at shipment from the factory and the important setup data such as refrigerant line /indoor unit /group address in (AUTO/MANUAL) mode have been stored at installation.

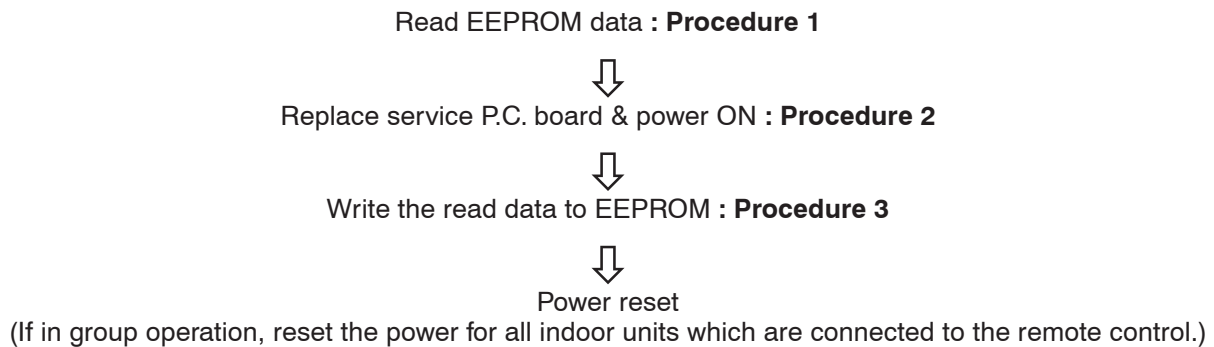

Part code	Model type	P.C. board model
4316V596	MMD-AP BH2UL series	MCC-1510

Replace the service indoor P.C. board assembly according to the following procedure.  
After replacement, make sure that the indoor unit address is set correctly and also the refrigerant cycle is working correctly by test operation.

#### <Replacement procedure>

#### Method 1

**Before replacement, power of the indoor unit can be turned on and the setup data can be readout by the wired remote control.**

#### Method 2

**Before replacement, the setup data can not be read out by the wired remote control.**

#### Procedure1: Readout of the setup data from EEPROM

(Data in EEPROM contents, which have been changed at the local site, are read out together with data in EEPROM set at shipment from the factory.)

1. Push ,  and  buttons of the remote control at the same time for 4 seconds or more. **1**  
(Corresponded with No. in Remote control as shown below picture)

\* When group operation, the header indoor unit address is displayed at the first time. In this time, the CODE No. (DN)  is displayed. The fan of the second indoor unit operates.

2. Every pushing  button (button at left side), the indoor unit address in the group are displayed successively. **2** Specify the indoor unit No. to be replaced.
3. Using the set temperature  buttons, the CODE No. (DN) can be moved up and down one by one. **3**
4. First change the CODE No. (DN) from  to . (Setting of filter sign lighting time)  
Make a note of the set data displayed in this time.
5. Next change the CODE No. (DN) using the set temperature  buttons.  
Also make a note of the set data.
6. Repeat item 5. and made a note of the important set data as shown in the below table.
- \*  are provided in the CODE No. (DN). On the way of operation, DN No. may skip.
7. After finishing making a note, push  button to return to the usual stop status. **4**  
(Approx. 1 minute is required to be able to use the remote control.)

**Minimum requirements for CODE No.**

DN	Contents
11	Indoor unit capacity
12	Refrigerant line address
13	Indoor unit address
14	Group address

Capacity of the indoor unit is necessary to set the revolutions of the fan.

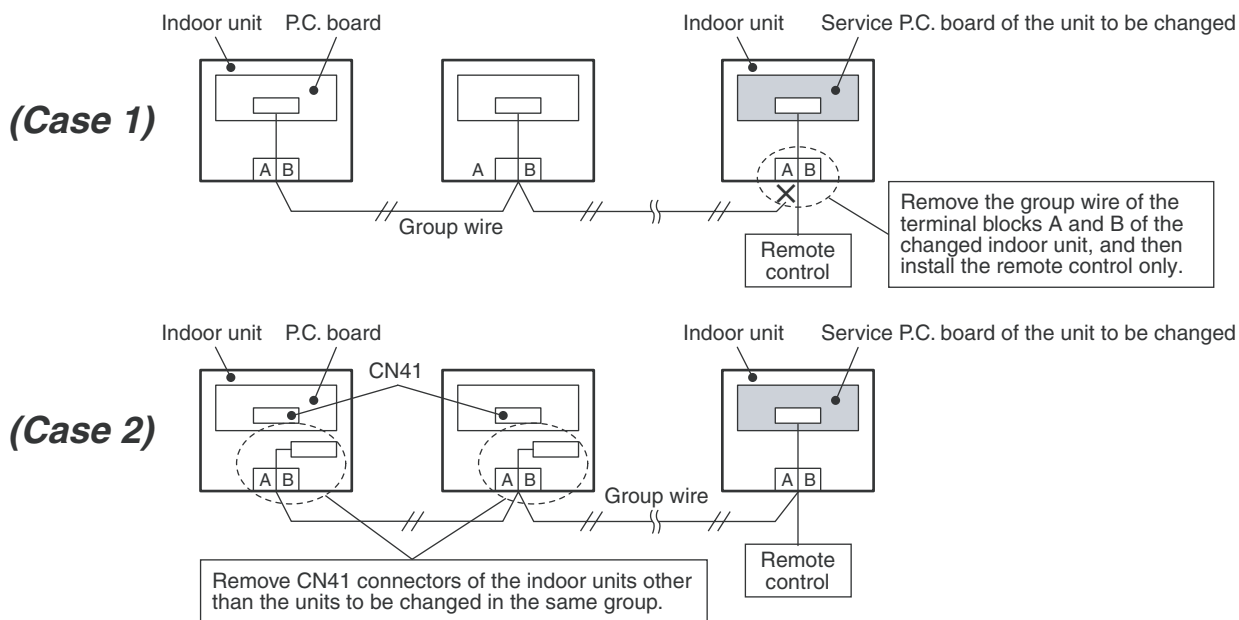

## Procedure2: Replacement of service P.C. board

1. Replace the P.C. board with a service P.C. board.  
In this time, setting of jumper line (cut) or setting of DIP switch on the former P.C. board should be reflected on the service P.C. board. Refer to the following table about DIP switch setting and drawing of P.C. board parts layout.
2. It is necessary to set Indoor unit to be exchanged : Remote control = 1 : 1  
Based upon the system configuration, turn on power of the indoor unit with one of the following items.
  - 1) Single (Individual) operation  
Turn on power of the indoor units and proceed to **Procedure 3**
  - 2) Group operation
    - A) In case that power of the exchanged indoor unit only can be turned on.  
Turn on power of the exchanged indoor unit only and proceed to **Procedure 3**
    - B) In case that power of the indoor units cannot be turned on individually. (**CASE 1**)
      - a) Remove temporarily the group wire connected to the terminal blocks A and B of the exchanged indoor unit.
      - b) After connecting the remote control wire only to the removed terminal block, turn on power of the indoor units and proceed to **Procedure 3**
- \* When the above methods cannot be used, follow at the **CASE 2** below.

C) In case that power of the indoor units cannot be turned in individually. (**CASE 2**)

- a) Remove all CN41 connectors of the indoor units in the same group except those of the exchanged indoor unit.
- b) Turn on power of the indoor units and proceed to **Procedure 3**

\* After **Procedure 3** operation has finished, be sure to return the temporarily removed group wire or CN41 connector to the original connection.

## P.C. board parts layout drawing

## Method of DIP switch setting

		Selected content	MMD-AP***BH2UL series	At shipment
SW01	Bit 1	No use	OFF	OFF
	Bit 2	Setup of external static pressure	*1	OFF
SW02	Bit 1	No use	OFF	OFF
	Bit 2	Setup of external static pressure	*1	OFF

\*1 : Match to set up contents of P.C. board before replacement.

## Procedure2: 3 Writing of the setup contents to EEPROM

(The contents of EEPROM installed on the service P.C. board have been set up at shipment from the factory.)

1. Push **SET**, **CL** and **TEST** buttons of the remote control at the same time for 4 seconds or more. **1**  
(Corresponded with No. in remote control as shown below picture) (The UNIT No. ALL is displayed.)  
In this time, the CODE No. (DN) **10** is displayed.  
The fan of the indoor unit operates.
2. Using the set temperature **TEMP.** buttons, the CODE No. (DN) can be moved up and down one by one. **2**
3. First, set the type, capacity codes and High IEER setting of the indoor unit.  
(Changing the the type, capacity codes and High IEER setting in EEPROM overwrites the factory default settings.)
  - 1) Set the CODE No. (DN code) to **10** (no change)
  - 2) Use the **TIME** button to select the type. **3**  
(Medium static ducted type : "0004" )
  - 3) Push the **SET** button. (The display should change from flashing to steady.) **4**
  - 4) Use the **TEMP.** button to set the CODE No. (DN code) to **11**. **2**
  - 5) Use the **TIME** button to select the capacity code. **3**  
(For example, "0005" for MMD-AP0124BH2UL-1) Refer to the attached table 2.
  - 6) Push the **SET** button. (The display should change from flashing to steady.) **4**
  - 7) Use the **TEMP.** button to set the CODE No. (DN code) to **CF**. **2**
  - 8) Use the **TIME** button, set **0000** (initial) to "0001". **3**  
(High IEER type : "0001" )
  - 9) Push the **SET** button. (The display should change from flashing to steady.) **4**
  - 10) Push **TEST** button to return to usual stop status. **5**  
(Approx. 1 minute is required to start handling of the remote control.)
4. Next write the contents that have been written at the installation such as the address data into EEPROM.  
Repeat the above **procedure 1**.
5. Using the set temperature **TEMP.** buttons, set **1** to the CODE No. (DN). **2**  
(Setup of lighting time of filter sign)
6. The contents of the displayed setup data in this time should be agreed with the contents in the previous memorandum in **□1**.
  - 1) If data disagree, change the displayed setup data to that in the previous memorandum by the timer time **TIME** buttons, and then push **SET** button. (OK when the display goes on.)
  - 2) There is nothing to do when data agrees.
7. Using the set temperature **TEMP.** buttons, change the CODE No. (DN).  
As same as the above 6., check the contents of the setup data and then change them to data contents in the previous memorandum in **□1**.
8. Then repeat the **procedure 6. and 7.**
9. After completion of setup, push **TEST** button to return the status to the usual stop status. **5**  
In a group operation, turn off the power supply once, return the group wires between indoor units and CN41 connectors as before, and then turn on power of all the indoor units.  
(Approx. 1 minute is required to be able to use of the remote control.)
 

\* **1** to **RR** are provided in the CODE No. (DN). On the way of operation, DN No. may skip.  
When data has been changed by mistake and **SET** button has been pushed, the data can be returned to the data before change by pushing **CL** button if the CODE No. (DN) was not yet changed.

**Table 2****CODE No. table (Please record the objective unit data at field)**

DN	Item	Memo	At shipment
01	Filter sign lighting time		0002: 2500 hour
02	Dirty state of filter		0000: Standard
03	Central control address		0099: Unfixed
06	Heating suction temp shift		0002: + 3.6 °F (+2 °C)
0C	PRE-DEF indication selection		0000: Standard
0F	Cooling only		0000: Heat pump
10	Type	Be sure to set as 0004	0004: Medium static ducted type
11	Indoor unit capacity (See below table)		According to capacity type
12	Refrigerant line address		0099: Unfixed
13	Indoor unit address		0099: Unfixed
14	Group address		0099: Unfixed
28	Automatic restart from power cut		0001: Available
2A	Option input selection (CN80)		0002: External emergency input
2b	Thermostat output selection (T10 ③)		0000: Thermostat-ON
2E	Input selection (T10 ①)		0000: Operation input
32	Sensor selection		0000: Available
60	Timer set (Wired remote control)		0000: Available
CF	High IEER setting		0001: Available

# WARNINGS ON REFRIGERANT LEAKAGE

## Important

### Check of Concentration Limit

The room in which the air conditioner is to be installed requires a design that in the event of refrigerant gas leaking out, its concentration will not exceed a set limit.

The refrigerant R410A which is used in the air conditioner is safe, without the toxicity or combustibility of ammonia, and is not restricted by laws to be imposed which protect the ozone layer. However, since it contains more than air, it poses the risk of suffocation if its concentration should rise excessively. Suffocation from leakage of R410A is almost non-existent. With the recent increase in the number of high concentration buildings, however, the installation of multi air conditioner systems is on the increase because of the need for effective use of floor space, individual control, energy conservation by curtailing heat and carrying power etc.

Most importantly, the multi air conditioner system is able to replenish a large amount of refrigerant compared with conventional individual air conditioners. If a single unit of the multi conditioner system is to be installed in a small room, select a suitable model and installation procedure so that if the refrigerant accidentally leaks out, its concentration does not reach the limit (and in the event of an emergency, measures can be made before injury can occur).

In a room where the concentration may exceed the limit, create an opening with adjacent rooms, or install mechanical ventilation combined with a gas leak detection device.

The concentration is as given below.

$$\frac{\text{Total amount of refrigerant (lbs (kg))}}{\text{Min. volume of the indoor unit installed room (ft}^3 \text{ (m}^3\text{))}} \leq \text{Concentration limit (lbs/ft}^3 \text{ (kg/m}^3\text{))}$$

The concentration limit of R410A which is used in multi air conditioners is 0.019 lbs/ft<sup>3</sup> (0.3kg/m<sup>3</sup>).

### NOTE 1 :

If there are 2 or more refrigerating systems in a single refrigerating device, the amounts of refrigerant should be as charged in each independent device.

For the amount of charge in this example:

The possible amount of leaked refrigerant gas in rooms A, B and C is 22 lbs (10kg).

The possible amount of leaked refrigerant gas in rooms D, E and F is 33 lbs (15kg).

### NOTE 2 :

The standards for minimum room volume are as follows.

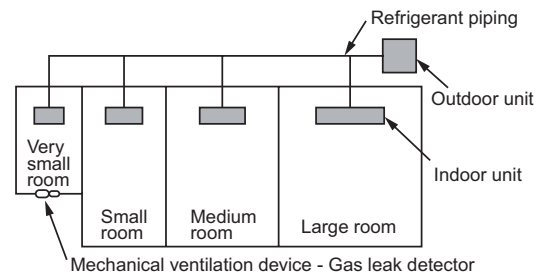

- 1) No partition (shaded portion)

- 2) When there is an effective opening with the adjacent room for ventilation of leaking refrigerant gas (opening without a door, or an opening 0.15% or larger than the respective floor spaces at the top or bottom of the door).

- 3) If an indoor unit is installed in each partitioned room and the refrigerant piping is interconnected, the smallest room of course becomes the object. But when a mechanical ventilation is installed interlocked with a gas leakage detector in the smallest room where the density limit is exceeded, the volume of the next smallest room becomes the object.

### NOTE 3 :

The minimum indoor floor area compared with the amount of refrigerant is roughly as follows:  
(When the ceiling is 8.9 ft (2.7m) high)
